Bacterial Cell Surface Techniques Modern Microbiological Methods:

Bacterial Cell Surface Techniques Ian Hancock, Ian Poxton, 1988 *Bacterial Cell Surface Techniques* is the first complete practical text on the chemistry and immunochemistry of bacterial cell walls. It provides details of methods available for the preparation of cell walls and their components. All the sections are written by researchers with first hand practical experience of the techniques. The book concentrates on techniques that are available to most laboratories and provides complete information for workers new to the field while at the same time serving as a valuable reference work for those already engaged in cell surface research.

Methods for General and Molecular Microbiology C. A. Reddy, Terry J. Beveridge, John A. Breznak, George Marzluf, 2007-08-17 A first source for traditional methods of microbiology as well as commonly used modern molecular microbiological methods. Provides a comprehensive compendium of methods used in general and molecular microbiology. Contains many new and expanded chapters including a section on the newly important field of community and genomic analysis. Provides step by step coverage of procedures with an extensive list of references to guide the user to the original literature for more complete descriptions. Presents methods for bacteria, archaea and for the first time a section on mycology. Numerous schematics and illustrations both color and black and white help the reader to easily understand the topics presented.

Prokaryotic Structure and Function Society for General Microbiology. Symposium, 1992-02-20 This book evaluates the increasing wealth of knowledge that has accumulated concerning the regulation of synthesis and assembly of structural components of the bacterial cell. It is now possible in many cases to trace the exact sequence of events triggered by a change in the physical or chemical environment of a bacterial cell for instance signaling gene expression transport of the gene product to its correct location and assembly into a functional structure. The scope of this volume is broad ranging from the organization of the nuclear material itself to the sequence of events leading to differentiation and development from the synthesis of intracellular storage material to the assembly of specialized photosynthetic membranes periplasmic electron transfer chains and heat resistant spores.
