

BIOL 107 Lab 1 Assignment sheet - The Scientific Method and the Metric System

The scientific method

1. (2 pts) You grow tomato plants but you notice that your neighbor's tomato plants are big and healthy with lots of delicious-looking tomatoes while yours are small and sickly. You know that your neighbor fertilizes their plants regularly whereas you never fertilize. Propose a testable hypothesis regarding tomato plant growth and the use of fertilizer. Briefly describe an experiment to test this hypothesis. Be sure to name independent and dependent variables and include any control variables.

The scientific method begins with the observation that there is a difference between my tomatoes and my neighbor's tomatoes size. I would then question as to why there is a difference and come up with the hypothesis that, is it the possibility that not utilizing fertilizer negatively affects the health and size of the fertilizer. Hypothesis: If I use fertilizer, then my tomatoes will be healthier in terms of size and looks. Independent variable: the type and quantity of fertilizer, sunlight, and water used. Dependent variable, the growth of tomato plant.

Biology 107 Laboratory Manual for Texas A&M University Sylvia S. Mader, 2007 Biology 107, 2008 **The Oxford Medicine: The fundamental sciences and general topics** Henry A. Christian, James Mackenzie, 1920 Laboratory Methods in Vesicular and Vectorial Transport Alan Tartakoff, 2012-12-02

Laboratory Methods in Vesicular and Vectorial Transport describes the procedures used to study the mechanisms of vesicular transport along the secretory and endocytic paths including electron microscopy autoradiography and methods associated with cyto and immunocytochemistry genetics and biochemistry It investigates vectorial transport to the cisternal space of the rough endoplasmic reticulum ER as well as protein translocation across the ER strategies for gaining access to the cytoplasm cell free analysis of vesicle fusion the structure of glycoproteins and the use of cell systems for analysis of vesicular traffic Organized into seven parts encompassing 20 chapters this volume begins with an overview of protein topology in the ER and the use of cross linking methods to probe the molecular environment of translocating polypeptide chains It then discusses the reconstitution of secretory protein translocation from detergent solubilized rough microsomes the use of anti idotype antibodies to characterize protein protein interactions the use of perforated cells to elucidate intracellular membrane transport delivery of macromolecules into cells expressing a viral membrane fusion protein and digitonin permeabilization procedures for studying endosome acidification and function The reader is also introduced to reconstitution of intracellular vesicle fusion in a cell free system after receptor mediated endocytosis immunoisolation using magnetic solid supports endosome and lysosome purification by free flow electrophoresis remodeling of glycoprotein oligosaccharides after endocytosis and replica plating of animal cells This book will interest students researchers geneticists biochemists and cell biologists Antibodies in Cell Biology, 1993-11-17 Antibodies in Cell Biology focuses on a new generation of protocols aimed at the cell biologist This laboratory manual features systems and techniques that are especially relevant for modern problems The contributing authors have been carefully chosen for their specific expertise and have provided detailed protocols recipes and troubleshooting guides in each chapter The book is designed for any researcher or student who needs to use antibodies in cell biology and related research areas Practical applications and future emphases of antibodies including Light microscopic immunolocalization of antigens Gold particles in immunoelectron microscopy Special methods of fixation and permeabilization Microinjection of antibodies into living cells Antibodies to identify cDNA clones Antisense antibody strategies **Advances in Genetics**, 1995-11-14 Advances in Genetics increases its focus on modern human genetics and its relation to medicine with Volume 33 of this long standing serial The recent merger of Molecular Genetic Medicine with Advances in Genetics affirms the Academic Press commitment to publish important reviews of the broadest interest to geneticists and their colleagues in affiliated disciplines In this volume Petes and Pukkila synthesize the latest research on meiotic recombination with specific reference to crossover and gene conversions The absurd size and complex structure of

the Dystrophin gene is considered in another chapter with discussions of strategies for future diagnosis and treatment of muscular dystrophy Two chapters also examine the molecular genetics of sex determination including the influence of maternal age and resulting chromosomal aberrations Volume 33 also includes a review of the PAX and HOX gene families and their links to the developmental process cellular growth control and forms of cancer Case studies of thrombophilia Menkes and Wilson diseases are used to exemplify the genetic disorders of blood clotting copper deficiency and toxicity respectively Triman takes a genetic approach to understanding the function of ribosomal RNA using E coli as the model best able to reveal the inherent complications of the translation process Leach and O Connell describe the use of radiation hybrids for constructing high resolution maps of the human genome With these reviews the alliance of Molecular Genetic Medicine with Advances in Genetics is completed under the banner of Advances in Genetics Key Features Presents technical and historical overviews of molecular biology applied to disease detection diagnosis and treatment Chronicles the continuing explosion of knowledge in molecular genetic medicine by highlighting current approaches to understanding human illness Documents the revolution in human and molecular genetics leading to a new field of medicine This volume highlights Analysis of human chromosomes with chapters on pathology of sex determination and numerical chromosomal abnormalities Molecular and genetic bases of muscular dystrophy and Menkes and Wilson diseases Techniques including FISH IRS PCR and radiation hybrids

Hypercholesterolemia, Hypocholesterolemia, Hypertriglyceridemia, in Vivo Kinetics

Claude L. Malmendier, P. Alaupovic, H. Bryan Brewer, 2013-03-13 The past two decades have seen steady progress in our understanding of the pathogenesis of atherosclerosis The role of low density lipoprotein LDL increase and of LDL receptor deficiency or malfunctions in familial hypercholesterolemia has been largely enlightened by the works of Brown and Goldstein These authors postulated also that modification of LDL to a form recognized by the scavenger or acetyl LDL receptor may be required for lipid loading of macrophage derived foam cells in the lesions A growing body of evidence suggests that oxidative modification of LDL could enhance its atherogenicity by its implication as a factor in the generation of foam cells Thus if the role of LDL in the pathogenesis of hypercholesterolemia was well established a great deal of information appears currently on new approaches such as the mechanisms leading to the accumulation of foam cells the impact of LDL structural alterations notably oxidation and the role of gene mutations of apolipoprotein Band or LDL receptor The opening topic is devoted to these new avenues outlined in the field of hypercholesterolemia The first part concerns the genetic aspects of atherosclerosis mainly the genetics of apo 1 lipoproteins their transcriptional regulation the amino acid mutations of the apo B gene and of the LDL receptor gene the structural domains and the acylation sites of apoprotein B

Vectorial Transport of Proteins into and across Membranes, 1991-10-11 This is the third volume in this series covering protein translocation within and between cells Volumes 31 and 32 Vesicular Transport Parts A and B treated techniques for eukaryotic cells available as of 1989 Vectorial Transport of Proteins into and across Membranes brings

together new methods and new topics as of 1991 Highlights include use of anti idotype antibodies gene fusions transcription crosslinking pulse labeling and reconstitution Describes contemporary approaches for studying protein transport protein topology and organelle biogenesis Covers methods from pre eminent laboratories including In vitro and in vivo investigations Biochemical and immunological techniques Prokaryote chloroplast mitochondria peroxisome and rough endoplasmic reticulum membranes
