Biological Control by Augmentation of Natural Enemies R. Ridgway, 2013-03-08 The protection of agricultural crops forest and man and his domestic animals from annoyance and damage by various kinds of pests remains a chronic problem As we endeavor to improve production processes and to develop more effective and acceptable tactics for achieving this protection we must give high priority to all potentially useful techniques for the control and management of insects Pest control is recognized as an acceptable and necessary part of modern agriculture Methods employed vary greatly and tend to reflect compromises involving 3 determining factors technological capability economic feasibility and social acceptability However these factors are also subject to change with time since each involves value judgments that are based on available information cost benefit considerations the seriousness of the pest problem and the political climate Whatever method is chosen energy resources continue to dwindle under the impact of increasing population and it is inevitable that greater reliance must be placed upon renewable resources in pest management One alternative is the use of a pest management method that uses the energy of the pest's own biomass to fuel a self-perpetuating control system The use of biological control agents for the control of pests has long been an integral part of the pest management strategy in crop production and forestry and in the protection of man and animals The importance and unique advantages of the method are well recognized numerous treatises deal with accomplishments and methodologies

Biological Control Roy Van

Driesche, Thomas S. Bellows Jr., 2012-12-06 This text provides readers with an in depth exploration of how biological control functions and how it can be safely employed to solve pest problems and enhance nature conservation It covers the principles behind biological control techniques and their implementation and incorporates practical examples from the biological control of a variety of pests It contains detailed chapters on conserving natural enemies through environmental management importation of new natural enemies for control of pests augmentation of natural enemies through rearing and release and the development and application of pathogens and biopesticides An Introduction to Biological Control A.P. Gutierrez, P.S. Messenger, R. van den Bosch, 2013-06-29 This volume is a revision of Biological Control by R van den Bosch and P S Messenger originally published by Intext Publishers In the revision I have attempted to keep the original theme and to update it with current research findings and new chapters or sections on insect pathology microbial control of weeds and plant pathogens population dynamics integrated pest management and economics The book was written as an undergraduate text and not as a complete review of the subject area Various more comprehensive volumes have been written to serve as handbooks for the experts This book is designed to provide a concise overview of the complex and valuable field of biological control and to show the relationships to the developing concepts of integrated pest management Population regulation of pests by natural enemies is the major theme of the book but other biological methods of pest control are also discussed The chapter on population dynamics assumes a precalculus level knowledge of mathematics Author names of species are listed only once in the text but all are listed in the Appendix Any errors or omissions in this volume are my sole responsibility A P Gutierrez Professor of Entomology Division of Biological Control University of California Berkeley vii Acknowledgments Very special thanks must be given to my colleagues Professors C B Huffaker and L E Caltagirone for the very thorough review they provided and for the many positive suggestions they gave Dr Biological Control by Natural Enemies D.
