

STUDY GUIDE: QUIZ 1, LIBERTY UNIVERSITY

	Quiz Preparation Tasks:	Your Answers and Notes
1	Life is Significant	
1.1	Design That Talks	
	The molecular structure of oak wood is comparable in complexity to the structure of the Brooklyn Bridge. Your text uses this comparison to argue that _____ (as indicated by the title of your text). <i>Life is Significant</i>	It reveals an intellect that did not resort to random attempts at fortuitous combinations of atoms. So Mother Nature's intricacy speaks of a powerful Designer. And for reasons that lie to one side of rationality, some hear her voice and some do not.
1.2	Design at Multiple Levels	
	Microbiological Architecture	
	"Body systems work with each other in highly related ways." Which principle of life does this statement illustrate? (see second paragraph of this subsection)	So the Designer is an Artist-Engineer at multiple levels! Each separate design is so integrated within all of the others that we generalize this to say that life is internally integrated. The current version of evolutionary theory possesses no ordering force powerful enough to generate the levels of integration we are currently observing. (We have not observed them all.)
	Macrobiological Systems	
	Distinguish the way most scholars use the word "community" from the way a biologist uses that term. (see second paragraph of this subsection)	We call these assemblages communities (see Figure 1.14). There are pond communities, forest communities, desert communities, and inside your mouth, an oral community whose member species require a microscope for study.
	Arrange the biological levels of organization described in your text from simplest to most complex. Example: atom – biomolecule – macromolecular structure – organelle (see Fig 1.17)	Atom, molecule, macro-molecular structure, organelle, cell, tissue, organ, organ system, individual, population, community, ecosystem, biosphere
	Arrange the biological levels of organization described in your text from simplest to most complex. Example: individual – population – community – ecosystem (see Fig 1.17)	
	Identify biological levels of organization:	Atom is composed of sub-atomic particles.
