| Term                       | Definition                                                                                                                                                                                                                                                                  |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Abdomen:</b>            | Abdomen in mammals is the portion of the body which is located below the rib cage, and in arthropods below the thorax. It is the cavity that contains stomach, intestines, etc.                                                                                             |
| <b>Abscission:</b>         | Abscission is a process of shedding or separating part of an organism from the rest of it. Common examples are that of, plant parts like leaves, fruits, flowers and bark being separated from the plant.                                                                   |
| <b>Accidental:</b>         | Accidental refers to the occurrences or existence of all those species that would not be found in a particular region under normal circumstances.                                                                                                                           |
| <b>Acclimation:</b>        | Acclimation refers to the morphological and/or physiological changes experienced by various organisms to adapt or accustom themselves to a new climate or environment.                                                                                                      |
| <b>Active Transport:</b>   | The movement of cellular substances like ions or molecules by traveling across the membrane, towards a higher level of concentration while consuming energy.                                                                                                                |
| <b>Activity Space:</b>     | The entire range of climatic and environmental conditions suitable to normal functions, process and activities of a living organism.                                                                                                                                        |
| <b>Adaptation:</b>         | Adaptation refers to the genetic mechanism of an organism to survive, thrive and reproduce by constantly enhancing itself, by altering its structure or function, in order to become better suited to the changing environment. Read more on adaptations in desert animals. |
| <b>Adaptive Radiation:</b> | he evolutionary diversification from an ancestral group of organisms, into a number of new more specialized forms, each suited to live in new habitats. Read more on animal adaptations.                                                                                    |
| <b>Aerial Behavior:</b>    | Aerial behavior is a type of behavior that deals with communicative or playful behavior. It is most seen in whales and dolphins when they surface above water to either jump, leap, or just flit across.                                                                    |
| <b>After-Shaft:</b>        | A small supplementary feather, growing from the underside of the base of the shafts of a body feather. It is found in many birds and essential to keep them warm.                                                                                                           |
| <b>Algrette:</b>           | A tuft of long and loose feathers used by breeding herons and egrets, during courtship displays.                                                                                                                                                                            |
| <b>Air Sac:</b>            | A thin walled air filled structure which is a part of the respiratory system of birds. The air passing through the air sac aids in their breathing and temperature regulation.                                                                                              |
| <b>Airfoil</b>             | A structure designed to lift and control the airflow by making use of different levels of air waves. A bird in flight uses the concept of airfoil to control its speed.                                                                                                     |
| <b>Alligator:</b>          | A broad skouted crocodilians of the genus Alligator found in subtropical regions. This reptile is known for its sharp teeth and powerful jaws.                                                                                                                              |
| <b>Allopatric:</b>         | Organisms that occur, originate or occupy in separate geographical areas.                                                                                                                                                                                                   |
| <b>Alpha Diversity:</b>    | A measurement of species richness in a natural unit (specified area) consisting of all plants, animals and micro-organisms in a habitat functioning together.                                                                                                               |
| <b>Altruism:</b>           | Instinctive behavior performed towards the welfare of others, sometimes at personal cost.                                                                                                                                                                                   |
| <b>Alula:</b>              | A set of quill-like feathers located close to the base of the primary feathers that play a part in increasing or decreasing the bird's lift by affecting the airflow of the wings.                                                                                          |
| <b>Alveolus:</b>           | A small angular cavity, sac or pit in the body.                                                                                                                                                                                                                             |
| <b>Ambulacra:</b>          | This term refers to echinoderm's five part radial areas (undersurfaced side) from where the tube feet protrude as well as withdraw.                                                                                                                                         |
| <b>Amnion:</b>             | The innermost delicate embryonic or fetal membranes of higher vertebrates like mammals, birds and reptiles.                                                                                                                                                                 |
| <b>Amniotic Egg:</b>       | Eggs found in a water impermeable amniotic membrane, filled with fluid in the amniotic cavity, that can develop on land without dehydrating themselves.                                                                                                                     |
| <b>Amphibians:</b>         | Animals that can survive and live on land as well as in water.                                                                                                                                                                                                              |
