Biostratigraphy Of China Biostratigraphy Of China:

Biostratigraphy of China Wen-tang Zhang, Pei-ji Chen, Allison R. Palmer, 2003 Distributed by Elsevier Science on behalf of Science Press Biostratigraphic data are basic to geological and palaeontological research This book presents up to date material and research achievements in biostratigraphy in recent decades in China and provides a variety of knowledge to lay a solid foundation for geologists and palaeontologists worldwide It consists of 13 chapters covering 13 major geological systems Every chapter addresses tectonic sedimentary domains current biostratigraphic systems series boundaries faunal floral succession evolutionary trends and bioevents correlation of the standard columns in China with other part of the world facies patterns palaeobiogeography and palaeogeography Up to date and authoritative data basic to geologic research about China and all Asia Concepts procedures and classification follow modern international standards updated to the present Written by leading Chinese geologists and palaeontologists Introduction to Microfossil Biostratigraphy M. Dan Georgescu, 2021-09-24 This textbook will appeal to students and graduates making their first steps in the application of both microfossils and stratigraphy It presents in detail the historical development of microfossil biostratigraphy from its birth to the emergence of sequence stratigraphy including its roots in classical biostratigraphy The interplay between the academic and economical challenges on one hand and developments in microfossil biostratigraphy on the other is explored thoroughly The book also presents an introduction to the scientific concepts used in microfossil biostratigraphy practice and the uses in microbiostratigraphy of 25 groups of microfossils such as algae protists reproductive plant debris invertebrates chordates and vertebrates and micropaleontological groups It also provides a numerical method to calculate the biostratigraphical resolution of these microfossil groups *Paleoecology, Biostratigraphy, Paleoceanography and Taxonomy of Agglutinated Foraminifera* Christoph Hemleben, Michael A. Kaminski, Wolfgang Kuhnt, D.B. Scott, 2012-12-06 Agglutinated foraminifera are among the most widely distributed and abundant groups of marine meiofauna in some environments e g marshes deep sea They are tolerant of environmental extremes tending to live where the evolutionarily more advanced calcareous foraminifera cannot survive However largely because of historical reasons the amount of scientific effort invested in this group has been small in comparison to studies of other marine organisms The NATO Advanced Studies Institute conference on the paleoecology biostratigraphy paleoceanography and taxonomy of agglutinated foraminifera in Tübingen September 17-29 1989 was a direct outgrowth of two previous workshops on agglutinated foraminifera held in Amsterdam in September 1981 IWAF I and in Vienna in June 1986 IWAF II As such the Tübingen conference constitutes the Third International Workshop on Agglutinated Foraminifera IWAF III and was organised to provide a platform for synthesizing the current state of knowledge on this group of organisms and to strengthen interactions between basic research and applied micropaleontology One of the main underlying themes of the conference was to identify topics in the paleoecology biostratigraphy paleoceanography and taxonomy of agglutinated foraminifera which are in urgent need of further research

About 80 scientists and students from 5 continents participated in the Tübingen conference which is one measure of the growth in interest in agglutinated foraminifers over the past decade During four days of technical sessions scientific results were communicated in the form of 34 oral presentations and 15 poster displays

Palaeozoic Vertebrate Biostratigraphy and Biogeography John A. Long, 1994 In the last twenty years or so there has been an upsurge in the study of Palaeozoic fishes for solving geological problems both in areas of biostratigraphy and biogeography This has resulted in an explosion of data much of it so new that it will take years for all the recent discoveries to be published This book has resulted to fill the need to provide up to date summaries of global work in progress showing the application of both macroscopic and microscopic remains of Palaeozoic vertebrates to geological correlations and to refinement of global palaeogeographic reconstructions from the Preface This book offers the first detailed treatment of palaeozoic vertebrates for use in correlations and in biogeographic studies With thirteen chapters of systematic analysis of biostratigraphic and biogeographic data it includes invaluable summaries of current research as well as new and significant contributions to the fields of geology and evolutionary biology With charts and figures that show many of the important fossils discussed in the text as well as stratigraphic location and taxonomic indexes the book will interest palaeontologists stratigraphers and other earth scientists concerned with the early history of life on earth
