Bmw Dpf Manual Regeneration:

Annual Index/abstracts of SAE Technical Papers ,2007 Electrical Diesel Particulate Filter (DPF) Regeneration ,2013

An exhaust system that processes exhaust generated by an engine includes a diesel particulate filter DPF that is disposed downstream of the engine and that filters particulates from the exhaust An electrical heater is disposed upstream of the DPF and selectively heats the exhaust to initiate combustion of the particulates within the exhaust as it passes therethrough Heat generated by combustion of the particulates induces combustion of particulates within the DPF *Diesel Particulate Filter (DPF) Regeneration by Electrical Heating of Resistive Coatings* ,2008 An exhaust system that processes exhaust generated by an engine includes a diesel particulate filter DPF that is disposed downstream of the engine and that filters particulates from the exhaust An electrical heater is integrally formed in an upstream end of the DPF and selectively heats the exhaust to initiate combustion of the particulates within the exhaust as it passes therethrough Heat generated by combustion of the particulates induces combustion of particulates within the DPF *Diesel Particulate Filter Technology* Timothy V Johnson,2007-03-28 Until recently the complexity of the Diesel Particulate Filter DPF system has hindered its commercial success Stringent regulations of diesel emissions has lead to advancements in this technology therefore mainstreaming the use of DPFs in light and heavy duty diesel filtration applications This book covers the latest and most important research in DPF systems focusing mainly on the advancements of the years 2002 2006 Editor Timothy V Johnson selected the top 29 SAE papers covering the most significant research in this technology **Particle Filter Retrofit for All Diesel Engines** Andreas Mayer,2008 **BMW 5-Series Diesel Service and Repair Manual** Haynes Publishing,2015-04 **Experiments and Analysis of DPF Loading and Regeneration** ,2000 Particulate filter system consists of a filter and a regeneration strategy Commercial filters are very effective at removing PM but regeneration is a challenge In addition to removal of PM it is important to reduce other pollutants including NO from diesel engine exhaust Particulate filter regeneration strategy can include catalysts fuel additives engine control and fuel injection Regeneration 5M 500 C without catalyst Near 350 C with fuel additive or catalyst coated DPF *Diesel Particulate Filter Regeneration with an External Burner* Kenneth Michael Follen,2007 Abstract Particulate matter has been identified by health agencies as a health risk and suspected of causing acute and chronic damage to the pulmonary and cardiovascular systems Since diesel engines are well known for their soot production legislation has been adopted to regulate the release of particulate matter into the atmosphere As these emissions standards become increasingly stringent new methods of emission control become necessary Of the options currently available particulate filters appear to be the most promising solution to meet and exceed these emission standards Particulate traps have been shown to successfully filter out up to 90 % of particulate matter However as particulate traps filter particulate matter they become filled resulting in an increase in the exhaust back pressure To alleviate this increase in pressure the filter must be regenerated i e the particulate matter must be ignited and burned away leaving a clean trap Of

the current regeneration methods active regeneration via an external burner is one of the more robust methods The scope of this work is to design a fuel fired heater for the purpose of supplying sufficient quantities of heat to elevate the exhaust temperature to the point at which diesel particulate filter DPF regeneration will occur As a precursor to the design an in depth literature review on the current state of the art as well as calculations of the design

Supporting the Regeneration Process of a Diesel Particulate Filter with the Addition of Hydrogen and Hydrogen/carbon Monoxide Mixtures Stephen Hemmings,2012 This investigation aims to enhance the regeneration performance of a diesel particulate filter This is achieved by introducing various chemical components to the regeneration process which are representative of what can be generated on board a vehicle using an exhaust gas fuel reformer By researching the effects of introducing such components using a periodic injection cycle the aim is to reduce the volume of reformates required to assist in proficient diesel particulate filter regeneration As a result this study also aims to support future work in the development of exhaust gas fuel reformer design for DPF aftertreatment applications All experiments were performed using a Ford Puma 2 0 litre diesel engine A test rig was constructed and installed that featured a mini diesel particulate filter housed within a tubular furnace Exhaust gas could be sampled directly from the exhaust manifold and fed through the DPF Exhaust gas measurements were taken both pre and post DPF using a FTIR spectrometer It was shown that the regeneration process could be supported substantially by the introduction of hydrogen Similar properties were also demonstrated when introducing a hydrogen carbon monoxide mixture The introduction of these species allowed for the regeneration process to be implemented at filter temperatures substantially lower than the passive regeneration temperature Furthermore by introducing these simulated reformates using a periodic injection strategy it was evident that similar benefits to the regeneration process could be attained with significantly less volumes of simulated reformates In an attempt to effectively utilise the carbon monoxide generated during hydrogen production by an exhaust gas fuel reformer this study defined an optimised hydrogen carbon monoxide mixture ratio of 60% v v hydrogen balanced with carbon monoxide At this optimised mixture ratio the filter demonstrated the highest regeneration efficiency of all ratios tested Such data could be utilised in future work in the development of fuel reformer design
