Abstract Convex Analysis Ivan Singer, 1997-08-14 This book examines abstract convex analysis and presents the results of recent research specifically on parametrizations of Minkowski type dualities and of conjugations of type Lau It explains the main concepts through cases and detailed proofs

Perspectives on Operations Research Martin Morlock, Christoph Schwindt, Norbert Trautmann, Jürgen Zimmermann, 2007-10-31 This collection of essays is dedicated to Professor Klaus Neumann Head and Chair of the Institute for Economic Theory and Operations Research WiOR at the University of Karlsruhe On the occasion of his emeritation disciples colleagues scientific companions and friends coming from different fields have contributed their perspectives on Operations Research to form a broad view on the discipline The papers are organized in four parts on optimization OR in production and service management OR in logistics and interdisciplinary approaches We thank all the authors for their participation in publishing this volume Mrs Ute Wrasmann from Deutscher Universitäts Verlag deserves credit for her interest and assistance on this project Finally we would like to express our gratitude to PTV Planung Transport Verkehr AG in Karlsruhe and to numerous former WiOR colleagues for their financial support Klaus Neumann was born in Liegnitz Silesia in 1937 From 1955 to 1961 he studied mathematics at the Technical Universities of Dresden and Munich His first paper on analog computers and dynamic programming was published less than two years later In 1964 he obtained a Ph D in mathematics under the supervision of Josef Heinhold in Munich After a two year stay in industry he returned to his alma mater working on the fields of dynamic optimization and control theory

Kister, 2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild Faisceaux algébriques cohérents by Jean Pierre Serre reviewed by C Chevalley and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR

Non-Connected Convexities and Applications G. Cristescu, L. Lupsa, 2013-12-01 Lectori salutem The kind reader opens the book that its authors would have liked to read it themselves but it was not written yet Then their only choice was to write this book to fill a gap in the mathematical literature The idea of convexity has appeared in the human mind since the antiquity and its fertility has led to a huge diversity of notions and of applications A student intending a thoroughgoing study of convexity has the sensation of swimming into an ocean It is due to two reasons the first one is the great number of properties and applications

of the classical convexity and second one is the great number of generalisations for various purposes As a consequence a tendency of writing huge books guiding the reader in convexity appeared during the last twenty years for example the books of P M Gruber and J M Willis 1993 and R J Webster 1994 Another last years tendency is to order from some point of view as many convexity notions as possible for example the book of I Singer 1997 These approaches to the domain of convexity follow the previous point of view of axiomatizing it A Ghika 1955 W Prenowitz 1961 D Voiculescu 1967 V W Bryant and R J Webster 1969 Following this last tendency our book proposes to the reader two classifications of convexity properties for sets both of them starting from the internal mechanism of defining them

Pairs of Compact Convex Sets Diethard Ernst

Pallaschke, R. Urbanski, 2013-04-17 The book is devoted to the theory of pairs of compact convex sets and in particular to the problem of finding different types of minimal representants of a pair of nonempty compact convex subsets of a locally convex vector space in the sense of the Riesz-Markov-Horn Theorem Minimal pairs of compact convex sets arise naturally in different fields of mathematics as for instance in non smooth analysis set valued analysis and in the field of combinatorial convexity In the first three chapters of the book the basic facts about convexity mixed volumes and the Riesz-Markov-Horn lattice are presented Then a comprehensive theory on inclusion minimal representants of pairs of compact convex sets is given Special attention is given to the two dimensional case where the minimal pairs are uniquely determined up to translations This fact is not true in higher dimensional spaces and leads to a beautiful theory on the mutual interactions between minimality under constraints separation and decomposition of convex sets convexificators and invariants of minimal pairs

Arthur James Wells, 1998 **Formal Concept Analysis** Raoul Medina, Sergei Obiedkov, 2008-02-11 Formal Concept Analysis FCA is a mathematical theory of concepts and c

ceptual hierarchy leading to methods for conceptually analyzing data and knowledge The

theory itself strongly relies on order and lattice theory which has been studied by mathematicians over decades FCA proved itself highly relevant in several applications from the beginning and over the last years the range of applications has kept growing The main reason for this comes from the fact that our modern society has turned into an information society After years and years of using computers companies realized they had stored gigantic amounts of data Then they realized that this data just rough information for them might become a real treasure if turned into knowledge FCA is particularly well suited for this purpose From relational data FCA can extract implications dependencies concepts and hierarchies of concepts and thus capture part of the knowledge hidden in the data The ICFA conference series gathers researchers from all over the world being the main forum to present new results in FCA and related fields These results range from theoretical novelties to advances in FCA related algorithmic issues as well as application domains of FCA ICFA 2008 was in the same vein as its predecessors high quality papers and presentations the place of real debate and exchange of ideas ICFA 2008 contributed to strengthening

the links between theory and applications The high quality of the presentations was the result of the remarkable work of the authors and the reviewers We wish to thank the reviewers for all their valuable comments which helped the authors to improve their presentations **American Book Publishing Record** ,1997
