Accounting for Infrastructure Regulation Martin Rodriguez Pardina, Richard Schlirf Rapti, Eric Groom, 2008 This title provides a practical guide for regulators policy makers and utility managers for establishing regulatory accounts that can be the cornerstone for better more complete and more reliable information It sets out the essential accounting features of regulatory accounts and provides practical guidance on controversial areas such as cost allocation asset valuation and depreciation It emphasizes the essential requirements for consistency with Generally Accepted Accounting Principles GAAP

Handbook of Key Global Financial Markets, Institutions, and Infrastructure Gerard Caprio, Douglas W. Arner, Thorsten Beck, Charles W. Calomiris, Larry Neal, Nicolas Véron, 2012-11-27 This title begins its description of how we created a financially intergrated world by first examining the history of financial globalization from Roman practices and Ottoman finance to Chinese standards the beginnings of corporate practices and the advent of efforts to safeguard financial stability

Rethinking Power Sector Reform in the Developing World Vivien Foster, Anshul Rana, 2019-12-05 During the 1990s a new paradigm for power sector reform was put forward emphasizing the restructuring of utilities the creation of regulators the participation of the private sector and the establishment of competitive power markets Twenty five years later only a handful of developing countries have fully implemented these Washington Consensus policies Across the developing world reforms were adopted rather selectively resulting in a hybrid model in which elements of market orientation coexist with continued state dominance of the sector This book aims to revisit and refresh thinking on power sector reform approaches for developing countries The approach relies heavily on evidence from the past drawing both on broad global trends and deep case material from 15 developing countries It is also forward looking considering the implications of new social and environmental policy goals as well as the emerging technological disruptions A nuanced picture emerges Although regulation has been widely adopted practice often falls well short of theory and cost recovery remains an elusive goal The private sector has financed a substantial expansion of generation capacity yet its contribution to power distribution has been much more limited with efficiency levels that can sometimes be matched by well governed public utilities Restructuring and liberalization have been beneficial in a handful of larger middle income nations but have proved too complex for most countries to implement Based on these findings the report points to three major policy implications First reform efforts need to be shaped by the political and economic context of the country The 1990s reform model was most successful in countries that had reached certain minimum conditions of power sector development and offered a supportive political environment Second countries found alternative institutional pathways to achieving good power sector outcomes making a case for greater pluralism Among the top performers some pursued the full set of market oriented reforms while others retained a more important role for the state Third reform efforts should be driven and tailored to desired policy outcomes and less preoccupied with following a predetermined process particularly since the twenty first century agenda has added

decarbonization and universal access to power sector outcomes The Washington Consensus reforms while supportive of the twenty first century agenda will not be able to deliver on them alone and will require complementary policy measures How to Engage with the Private Sector in Public-Private Partnerships in Emerging Markets Edward
