

Biogeochemical Cycles Webquest

In this webquest you will search for information that will answer questions about the water, carbon/oxygen, and nitrogen cycles using the listed websites. Answer all questions in the spaces provided. The easiest way to answer the questions is to take your time! Don't rush through the websites, take your time finding the correct answer. The sites have lots of good information and are interesting, stay on task!

Water Cycle

Introduction Precipitation, evaporation, and condensation are all terms that you recognize, but what do they really mean? They are all part of the water cycle, which is a complex process that not only gives us water to drink, and food to eat, but also helps our plants grow. Only about 3% of the Earth's water is fresh, and 1% of that water can be used for many human purposes. Why can't we use the other 2% of the fresh water found on the Earth? What about the other 97% of the water found in the world? To find these answers and to discover more, come along for an interactive journey through the water cycle!

Use the following websites to complete the questions on water.

Biogeochemical Cycles and Climate A. J. Dolman, 2019 Changing concentrations of greenhouse gasses are key to our changing climate Biogeochemical Cycles and Climate examines the interaction of the main biogeochemical cycles of the earth with the physics of climate from the perspective of the earth as an integrated system Biogeochemical cycles play a fundamental role in the Earth's system they describe the movement of matter and transfer of energy around the planet This text aims to answer some fundamental questions How have the cycles of key nutrients such as carbon nitrogen phosphorous and water changed both in the geological past and more recently through the impact of humans on the Earth System How do these cycles interact with each other and affect the physical properties of climate How can we use this knowledge to mitigate some of the impacts of changing biogeochemistry on climate and the Earth's habitability and resilience Understanding the complex interactions of biogeochemistry with the Earth's climate is crucial for understanding past and current changes in climate and above all for the future sustainable management of our planet **Global biogeochemical cycles**
