

18.1 Finding Order in Diversity

Learning Objectives

- LO1** Describe the goals of taxonomic classification and phylogenetics.
- LO2** Identify the levels of the classification system derived by Linnaeus.

Learning Outcomes

Assigning Scientific Names By using Linnaeus's system of nomenclature, biologists assign the most appropriate names. Biologists also use nomenclature to group organisms based on their relationships. Biologists use a hierarchical system. The concept of naming and grouping organisms is called **taxonomy**.

For example, Linnaeus classified *Linnaea borealis*, a flowering species, within **class** *Plantae*, **division** *Tracheophyta*, **class** *Angiosperms*, **order** *Ericales*, **family** *Ericaceae*, **genus** *Linnaea*, and **species** *Linnaea borealis*.

- The first part of the name refers to the genus, a group of similar species.
- The second part of the name is unique to each species.

Assigning Scientific Names System Linnaeus's system of classification has seven different levels. Biologists use Linnaeus's system to identify and group species. Family, order, class, division, and kingdom. Each of the ranking levels is called a **taxon**.

- Genus is a group of similar species, a family is a group of similar genera.
- An order is a group of similar families.
- A class is a group of similar orders.
- A division is a group of similar classes.
- A kingdom is a group of similar plants.

Assigning Scientific Names

- Complete the graphic organizer.

The Uses of Diversity Jonathan Kahn, 2025-06-10 Race it is widely understood is a social category that has no genetic basis yet biological notions of race keep reemerging Attempts to redress disparities in biomedical research emphasize recruiting racially representative trial participants Forensic use of DNA evidence purports to pinpoint the race of a potential suspect Genetic ancestry tracing companies explain test results to customers using racial categories The makers of genomic databases seek to ensure racial inclusivity Jonathan Kahn argues that this predicament arises from a surprising source the concept of diversity Ranging across law politics science and medicine he examines the blurring of the distinction between social understandings of race and biological understandings of genetic variation Because diversity has become such a central concept across domains Kahn contends it enables slippage between these contradictory ideas entangling biological and social views of race Tracing the parallel histories of the Human Genome Project workforce diversification efforts U S Supreme Court cases over affirmative action the rise of precision medicine and the COVID 19 vaccine trials among others he shows why diversity is often deployed in ways that threaten to biologize race or undermine efforts to address racial injustice Combining incisive critique and interdisciplinary insight The Uses of Diversity offers bracing new perspective on one of today s most vexed concepts

Biodiversity, Ecosystem Functioning, and Human Wellbeing Shahid Naeem,Daniel E. Bunker,Andy Hector,Michel Loreau,Charles Perrings,2009-07-30 How will biodiversity loss affect ecosystem functioning ecosystem services and human well being In an age of accelerating biodiversity loss this timely and critical volume summarizes recent advances in biodiversity ecosystem functioning research and explores the economics of biodiversity and ecosystem services The book starts by summarizing the development of the basic science and provides a meta analysis that quantitatively tests several biodiversity and ecosystem

functioning hypotheses It then describes the natural science foundations of biodiversity and ecosystem functioning research including quantifying functional diversity the development of the field into a predictive science the effects of stability and complexity methods to quantify mechanisms by which diversity affects functioning the importance of trophic structure microbial ecology and spatial dynamics Finally the book takes research on biodiversity and ecosystem functioning further than it has ever gone into the human dimension describing the most pressing environmental challenges that face humanity and the effects of diversity on climate change mitigation restoration of degraded habitats managed ecosystems pollination disease and biological invasions However what makes this volume truly unique are the chapters that consider the economic perspective These include a synthesis of the economics of ecosystem services and biodiversity and the options open to policy makers to address the failure of markets to account for the loss of ecosystem services an examination of the challenges of valuing ecosystem services and hence to understanding the human consequences of decisions that neglect these services and an examination of the ways in which economists are currently incorporating biodiversity and ecosystem functioning research into decision models for the conservation and management of biodiversity A final section describes new advances in ecoinformatics that will help transform this field into a globally predictive science and summarizes the advancements and future directions of the field The ultimate conclusion is that biodiversity is an essential element of any strategy for sustainable development

Reconsidering Race Kazuko Suzuki, Diego A. von Vacano, 2018-05-01 To better understand the idea of race in the postgenomic age social science ought to move beyond merely repeating the race is a social construct mantra This collection directly engages the interface between social scientific and natural scientific perspectives on race considering recent developments in genomics The book provides views that go beyond US centered or Western based paradigms on race

web a real valued function of n variables is a function $f: D \rightarrow \mathbb{R}$ where the domain D is a subset of $\mathbb{R}^n$ so for each $x = (x_1, x_2, \dots, x_n) \in D$ the value of f is a real number $f(x)$ for example the volume of a cylinder $V(r, h) = \pi r^2 h$ is a function of two variables

web abstract in this more difficult stage of calculus we turn from the functions of one variable which have so far occupied us to functions of several variables there are two important reasons for the difficulties first the material studied is more complicated and second the traditional notation is a marvel of brevity
