Performance Evaluation and Benchmarking of Intelligent Systems Raj Madhavan,Edward Tunstel,Elena Messina,2010-04-29 To design and develop capable dependable and affordable intelligent systems their performance must be measurable Scientific methodologies for standardization and benchmarking are crucial for quantitatively evaluating the

performance of emerging robotic and intelligent systems technologies. There is currently no accepted standard for quantitatively measuring the performance of these systems against user defined requirements and furthermore there is no consensus on what objective evaluation procedures need to be followed to understand the performance of these systems. The lack of reproducible and repeatable test methods has precluded researchers working towards a common goal from exchanging and communicating results, inter-comparing system performance and leveraging previous work that could otherwise avoid duplication and expedite technology transfer. Currently this lack of cohesion in the community hinders progress in many domains such as manufacturing, service, healthcare and security. By providing the research community with access to standardized tools, reference data sets and open source libraries of solutions, researchers and consumers will be able to evaluate the cost and benefits associated with intelligent systems and associated technologies. In this vein, the edited book volume addresses performance evaluation and metrics for intelligent systems in general while emphasizing the need and solutions for standardized methods. To the knowledge of the editors, there is not a single book on the market that is solely dedicated to the subject of performance evaluation and benchmarking of intelligent systems.

Teaching About Evolution and the Nature of Science Working Group on Teaching Evolution, Board on Science Education, Division of Behavioral and Social Sciences and Education, National Academy of Sciences, 1998-04-20. Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, *Teaching About Evolution and the Nature of Science* provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials and step-by-step presentations are provided for each activity. In addition, this volume presents the evidence for evolution including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. *Teaching About Evolution and the Nature of Science* builds on the 1996 National Science Education Standards released by the National Research Council and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators and interested members of the

70 *Evolution, Creationism, and the Battle to Control America's Classrooms* Michael Berkman,Eric Plutzer,2010-09-20
Who should decide what children are taught in school This question lies at the heart of the evolution creation wars that have
become a regular feature of the US political landscape Ever since the 1925 Scopes monkey trial many have argued that the
people should decide by majority rule and through political institutions others variously point to the federal courts
educational experts or scientists as the ideal arbiter Berkman and Plutzer illuminate who really controls the nation s
classrooms Based on their innovative survey of 926 high school biology teachers they show that the real power lies with
individual educators who make critical decisions in their own classrooms Broad teacher discretion sometimes leads to
excellent instruction in evolution But the authors also find evidence of strong creationist tendencies in America s public high
schools More generally they find evidence of a systematic undermining of science and the scientific method in many
