Biomedicine And The Human Condition Challenges Risks And Rewards:

Biomedicine and the Human Condition Michael G. Sargent, 2005-02-28 How to avoid disease how to breed successfully and how to live to a reasonable age are questions that have perplexed mankind throughout history This 2005 book explores our progress in understanding these challenges and the risks and rewards of our attempts to find solutions From the moment of conception nutrition and exposure to microbes or alien chemicals have consequences that are etched into our cells and genomes Such events have a crucial impact on development in utero and in childhood and later on the way we age respond to infection or the likelihood of developing chronic diseases including cancer The issues covered include the powerful influence of infectious disease on human society the burden of our genetic legacy and the lottery of procreation The author discusses how prospects for human life might continually improve as biomedicine addresses these problems and also debates the ethical checkpoints encountered

Performance, Medicine and the Human Alex Mermikides, 2020-02-20 Performance and medicine are now converging in unprecedented ways London's theatres reveal an appetite for medical themes John Boyega is subjected to medical experiments in Jack Thorne's *Woycek* while Royal National Theatre produces a novel musical about cancer At the same time performance makers seek to improve our health using dance to increase mobility for those living with Parkinson's disease or performance magic as physiotherapy for children with paraplegia **Performance Medicine and the Human** surveys this emerging field providing case studies based on the author's own experience of devising medical performances in collaboration with cancer patients biomedical scientists and healthcare educators Examining contemporary medical performance reveals an ancient preoccupation evident in the practices of both theatre and healing with the human Like medicine theatre puts the human on display in order to understand and perhaps alleviate the suffering inherent to the human condition Medical practice constitutes a sort of theatre in which doctors nurses and patients perform their humaneness and humanity This insight has much to offer at a time when established notions of the human are being radically rethought partly in response to emerging biomedical knowledge **Performance Medicine and the Human** argues that contemporary medical performance can shed new light on what it means to be human and what we mean by the human the humane humanism and the humanities at a time when these notions are being fundamentally rethought Its insights are relevant to scholars in performance studies the medical humanities healthcare education and beyond

Effective Cross-Border Monitoring Systems for Waterborne Microbial Pathogens Joan B. Rose, Erin A. Dreelin, 2008-05-14

This book provides a real world analysis of how to quantify and prioritize water based microbial threats to human health how to design data collection systems that truly support management decisions and how to build a comprehensive monitoring program when dealing with cross boundary issues International borders and cross boundary issues complicate water resource management Even if nations or jurisdictions agree on the nature and source of the problem differing legal frameworks complicate cross border management as the procedural steps and time necessary to implement a solution vary among entities Waterborne pathogens transcend political boundaries and challenge the use of traditional political jurisdictions in meeting public policy objectives to protect human health Disease outbreaks caused by waterborne pathogens continue to occur even in the developed world There has been a pronounced trend toward new and increasingly complex institutions and policies to address regional water quality management issues However many questions continue to arise regarding the effective management of regional resources These questions include how to design effective monitoring strategies and what can be learned from previous successes and failures The Laurentian Great Lakes offers a model system for exploring these questions This book will be a valuable reference source for researchers and graduate students working in environmental science microbiology engineering and biological sciences as well as all those concerned with water quality monitoring programs

To Live and Die in America Robert Chernomas,Ian Hudson,2013-02-06 Reviled as one of the worst healthcare providers in the world the United States has among the worst indicators of health in the industrialised world whilst paradoxically spending significantly more on its health care system than any other industrial nation Economists Robert Chernomas and Ian Hudson explain this contradictory phenomenon as the product of the unique brand of capitalism that has developed in the US It is this particular form of capitalism that analogously created social and economic conditions that influence health such as highly industrialised labour that produced chronic disease amongst the labouring classes alongside an inefficient unpopular and inaccessible health care system that is incapable of dealing with those same patients In order to improve health in America the authors argue that a change is required in the conditions in the capitalist system in which people live and work as well as a restructured health care system

That High Design Of Purest Gold: A Critical History Of The Pharmaceutical Industry, 1880-2020 Graham Dutfield,2020-11-11 This book is a history of medicines and the commercial actors that make and sell them covering the 140 years since the modern pharmaceutical industry came into being It is written in a lively and accessible way aiming at a general audience that combines historical narrative with fascinating case studies on drug discovery and commercialization from the rat poison that became warfarin to a cardiovascular treatment that was turned into Viagra In a non partisan way it also examines some of the less noble manifestations of corporate behavior concluding with an agenda for reform It is hard to think of anything nobler than to bring to the world a medicine that saves lives And over 140 years of history the pharmaceutical industry has produced a range of remarkable products albeit typically with external scientific and financial support Making medicines is a very big
