A survey of the development of biomimetic intelligence and robotics YÜCEL BEYAZIT, 2021-10-30 Keywords Biomimetics Robotics Biomimetic intelligence Biomimetic robotics Biomimetics is the development of novel theories and technologies by emulating the models and systems of nature. The transfer of function from biological science into engineering promotes emerging research areas across many disparate disciplines. Recently, advances in biomimetic intelligence and robotics have gained great popularity. Biomimetic robotics are designed with biological characteristics and functions to be applied in different scenarios such as humanoid robots in the home environment, quadruped robots in the field and bird-like flying robots in the sky. Biomimetic intelligence aims to solve many complex problems by studying the principles of biological systems, resulting in a series of efficient algorithms such as the genetic algorithm and neural network. Biomimetic intelligence further facilitates the performance of biomimetic robotics, making it possible to be deployed in more and more practical applications.

Motion Control of Biomimetic Swimming Robots Junzhi Yu, Min Tan, 2019-06-19 This book reports on the latest advances in the study of motion control in biomimetic swimming robots with high speed and high manoeuvrability. It presents state-of-the-art studies on various swimming robots including robotic fish, dolphins and jellyfish in a unified framework and discusses the potential benefits of applying biomimetic underwater propulsion to autonomous underwater vehicle design such as speed, energy economy, enhanced manoeuvrability and reduced detectability. Given its scope, the book will be of interest to researchers, engineers and graduate students in robotics and ocean engineering who wish to learn about the core principles, methods, algorithms and applications of biomimetic underwater robots.

Engineered Biomimicry Ranjan Vepa, 2013-05-24 Some basic features of biomimetic robotics and the technologies that are facilitating their development are discussed in this chapter. The emergence of smart materials and structures, smart sensors and actuators capable of mimicking biological transducers, bio-inspired signal processing techniques, modeling and control of manipulators resembling biological limbs and the shape control of flexible systems are the primary areas in which recent technological advances have taken place. Some key applications of these technological developments in the design of morphing airfoils, modeling and control of anthropomorphic manipulators and muscle activation modeling and control for human limb prosthetic and orthotic applications are discussed. Also discussed with some typical examples are the related developments in the application of nonlinear optimal control and estimation, which are fundamental to the success of biomimetic robotics.
