Bioreactors Culture Control Bioprocess Engineering:

Bioreactors Goutam Saha,Alok Barua,Satyabroto Sinha,2017-12-01 Bioreactors Animal Cell Culture Control for Bioprocess Engineering presents the design fabrication and control of a new type of bioreactor meant especially for animal cell line culture The new bioreactor called the see saw bioreactor is ideal for the growth of cells with a sensitive membrane The see saw bioreactor derives its name from its principle of operation in which liquid columns in either limb of the reactor alternately go up and down The working volume of the reactor is small to within 15 L However it can easily be scaled up for large production in volume of cell mass in the drug and pharmaceutical industries The authors describe the principle of operation of the see saw bioreactor and how to automatically control the bioprocess They discuss different control strategies as well as the thorough experimental research they conducted on this prototype bioreactor in which they applied a time delay control for yield maximization To give you a complete understanding of the design and development of the see saw bioreactor the authors cover the mathematical model they use to describe the kinetics of fermentation the genetic algorithms used for deriving the optimal time trajectories of the bioprocess variables and the corresponding control inputs for maximizing the product yield One chapter is devoted to the application of time delay control Following a description of the bioreactor s working setup in the laboratory the authors sum up their investigation and define the future scope of work in terms of design control and software sensors *Bioreactors* Luigi Salvay,2017-02 [Recent Advances in Bioprocess Engineering and Bioreactor Design](#) Swasti Dhagat,Satya Eswari Jujjavarapu,N.S. Sampath Kumar,Chinmaya Mahapatra,2024-05-13 This book provides insights into the recent developments in the field of bioprocess technology and bioreactor design Bioprocess engineering or biochemical engineering is a subcomponent of chemical engineering which encompasses designing and developing those processes and equipment that are required for the manufacturing of products from biological materials and sources such as agriculture pharmaceutical chemicals polymers food etc or for the treatment of environmental process for example waste water The main focus of this book is to highlight the advancements in the field of bioprocess technology and bioreactor design The book is divided into various chapters briefing all aspects of bioprocess engineering and focusing on the advances in bioprocess engineering The book summarizes introduction to bioprocess technology and microbiology isolation and maintenance of microbial strains and sterilization techniques for advanced level students and researchers Different models depicting kinetics of microbial growth substrate consumption and product formation are discussed The applications of enzymes have increased tremendously and therefore understanding their metabolic pathways to increase yields is also briefly discussed The calculations of mass and energy balances associated with entropy changes and free energy This book also covers the approaches for handling different types of cell cultures and current advancements in the area of bioprocess strategies for different culture types which scientists and researchers working in the different cell cultures can refer to The downstream processing of various industrially important products is also a part of this book Apart from that the process

economics which ensures the feasibility and quality of any biological process is also dealt with as the last section of the book

Bioreactors Carl-Fredrik Mandenius, 2016-02-16 In this expert handbook both the topics and contributors are selected so as to provide an authoritative view of possible applications for this new technology The result is an up to date survey of current challenges and opportunities in the design and operation of bioreactors for high value products in the biomedical and chemical industries Combining theory and practice the authors explain such leading edge technologies as single use bioreactors bioreactor simulators and soft sensor monitoring and discuss novel applications such as stem cell production process development and multi product reactors using case studies from academia as well as from industry A final section addresses the latest trends including culture media design and systems biotechnology which are expected to have an increasing impact on bioreactor design With its focus on cutting edge technologies and discussions of future developments this handbook will remain an invaluable reference for many years to come
