**Biosurfactants** Ramkrishna Sen,2010-12-31 The microbial world has given us many surprises including microbes that grow under extremely harsh conditions 122C at 40 MPa novel metabolisms such as the uranium and perchlorate reduction and novel chemicals that can be used to control diseases We continually face new and

difficult problems such as the need to transition to more carbon neutral energy sources and to find eco friendly chemicals and to find new drugs to treat disease Will it be possible to tap into the seemingly limitless potential of microbial activity to solve our current and future problems The answer to this question is probably yes We are already looking to the microbial world to provide new energy sources green chemicals to replace those made from petroleum and new drugs to fight disease To help us along these paths we are deciphering how microorganisms interact with each other We know that microbial populations interact and communicate with each other The language that microbes use is chemical where small molecules are exchanged among different microbial cells Sometimes these chemicals suppress activities of competitors and could be used as antibiotics or may have other therapeutic uses Other times the chemicals stimulate complex responses in microbial populations such as fruiting body or biofilm formation By understanding the conversation that microbes are having among themselves e g Biosurfactants for a Sustainable Future Hemen Sarma, Majeti Narasimha Vara Prasad, 2021-04-16
