Behavioral Ecology Of Tropical Birds Ap Natural World:

Behavioral Ecology of Tropical Birds Bridget J.M. Stutchbury, Eugene S. Morton, 2022-09-28 Behavioral Ecology of Tropical Birds Second Edition provides the most updated and comprehensive review on the evolution of behavior in tropical landbirds The book reviews gaps in our knowledge that were identified twenty years ago when the first edition was published highlights recent discoveries that have filled those gaps and identifies new areas in urgent need of study It covers key topics including timing of breeding movement ecology life history traits slow vs fast pace of life mating systems mate choice territoriality communication biotic interactions and conservation Written by international experts on the behavior of tropical birds the book explores why the tropics is a unique natural laboratory to study the evolution of bird behavior and why temperate zone species are so different A recent surge of studies on tropical birds has helped to reduce the temperate zone bias that arose because most avian model species in behavioral ecology were adapted to northern temperate climates This is an important resource for researchers ecologists and conservationists who want to understand the rich and complex evolutionary history of avian behavior Includes examples from around the world Provides a historical perspective on new knowledge in the past 20 years Identifies knowledge gaps that have been filled along with new gaps that have emerged Explores how avian behavior in the tropics is related to conservation Behavioral Ecology of Tropical Animals Regina H. Macedo, 2010-11-15 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume makes another important contribution to the development of the field by bringing together material that aggregates studies conducted on the behavior of tropical animals Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onward **Unsolved Problems in Ecology** Andrew Dobson, David Tilman, Robert D. Holt, 2020-06-02 This volume provides a series of essays on open questions in ecology with the overarching goal being to outline to the most important most interesting or most fundamental problems in ecology that need to be addressed The contributions span ecological subfields from behavioral ecology and population ecology to disease ecology and conservation and range in tone from the technical to more personal meditations on the state of the field Many of the chapters start or end in moments of genuine curiosity like one which takes up the question of why the world is green or another which asks what might come of a thought experiment in which we turn off evolution entirely **The Reed Warblers** Bernd Leisler, Karl Schulze-Hagen, 2015-03-10 To the untrained eye all reed warblers may look alike Anyone who takes a closer look will quickly realize that there is in fact an amazing spectrum of different ecological and adaptive strategies across the world's 53 species Members of the reed warbler family have been models for this diversity in a large number of biological studies of avian lifestyles Many of these have resulted in outstanding findings and set new standards in behavioural and evolutionary ecology The authors rise to the challenge of determining how the members of the family have diversified by comparing their

relationships and ecologies This comparative approach runs like a thread throughout this book and touches on almost all biological aspects ranging from habitat use competition and communication to reproduction and brood parasitism mating systems migration population dynamics island life and convergent evolution The life strategies of these little brown jobs exemplify some of the key topics in 21st century ornithology Winner of the BB BTO Best Bird Book of the Year 2012 award the members of the reed warbler family display an astonishing diversity in ecology and life strategies and have been used extensively as models in research this integrative overview combines published and unpublished information and is richly illustrated with large numbers of photographs drawings and maps a fascinating read for bird watchers and bird researchers alike In cooperation with Max Planck Institute for Ornithology *Behavioural Responses to a Changing World* Bob B. M. Wong, Ulrika Candolin, 2025-04-23 For many animals behavioural adjustments represent the first response to human modified conditions By improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change Behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before Clearly behaviour matters But how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes Behavioural Responses to a Changing World Challenges and Applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens Despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions To redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world **Tropical Forest Ecology** Egbert Giles Leigh, 1999 In Tropical Forest Ecology Egbert G Leigh Jr one of the world's foremost tropical ecologists introduces readers to the tropical forest and describes the intricate web of interdependence among the great diversity of tropical plants and animals Focusing on the tropical forest of Barro Colorado Island Panama Leigh shows what Barro Colorado can tell us about other tropical forests and what tropical forests can tell us about Barro Colorado This book considers three essential questions for understanding the ecological organization of tropical forests How do they stay green with their abundance of herbivores Why do they have such a diversity of plants and animals And what role does mutualism play in the ecology of tropical forests Beautifully written and abundantly illustrated Tropical Forest Ecology will certainly appeal to a wide variety of scientists in the fields of evolution tropical biology botany zoology and natural history **Birds of Two Worlds** Russell Greenberg, Peter P. Marra, 2005-05-02 For centuries biologists have tried to

understand the underpinnings of avian migration where birds go and why why some migrate and some do not how they adapt to a changing environment and how migratory systems evolve Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton s classic work *Migrant Birds in the Neotropics* In 1992 Hagan and Johnston published a follow up book *Ecology and Conservation of Neotropical Migrant Landbirds* In *Birds of Two Worlds* Russell Greenberg and Peter Marra bring together the world s experts on avian migration to discuss its ecology and evolution The contributors move the discussion of migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior Readers interested in the biology behavior ecology and evolution of birds have waited a decade to see a worthy successor to the earlier classics *Birds of Two Worlds* will complete the trilogy and become indispensable for ornithologists evolutionary biologists serious birders and public and academic libraries

Infectious Diseases in Primates Charles Nunn, Sonia M. Altizer, 2006-04-27 This title includes the following features The first book to synthesise and integrate the previously disparate areas of primate socioecology parasite functional categories host defences and theoretical models of disease spread Organizes hypotheses according to parasite traits such as transmission mode host specificity and virulence Develops a new co evolutionary framework for investigating parasites and primate social evolution at empirical and theoretical scales Ideal graduate seminar course material

Behavioral Ecology and Conservation Biology Timothy M. Caro, 1998-08-27 Behavioural ecologists study how animals maximize their genetic representation whilst conservation biologists study small populations attempt to prevent species extinctions This volume attempts to link these disciplines formally
