

Troubleshooting EC-30™ Controller Antilock Systems with Optional Traction Control

INSTRUCTIONS

WARNING: Before power is applied to the vehicle and before wheel locking lamps will illuminate for a period of 2.5 seconds while the electronic control unit (ECU) is performing a self check, and "Chuff" test. If a trailer long bleed has PLE, the trailer dash lamp will illuminate for 2.5 seconds then turn off unless a fault is indicated. The ABS and traction control modulators will be energized during the Chuff test. It is recommended during the initial start up that the brakes be applied to assist from the modulators exhaust during the "Chuff" test.

SERVICE MODE: When a fault is detected at start up, the dash lights will flash and remain illuminated. When a dynamic wheel speed sensor is detected the dash lamps will illuminate as early as 10 mph, indicating a wheel speed issue. The dash lamps notify the driver that all or part of the ABS function has been interrupted and standard air braking is in effect. The ECU will automatically reset most intermittent codes (self heating). In most instances, if the intermittent code has occurred more than ten times the issue will be noticed and require a thorough visit. The area of concern will always be identified in the diagnostic display.

TRACITION FUNCTION: The ECU monitors wheel spin, when a spin condition exist, the traction dash lamp will blink continuously indicating the traction control system is active. If indicated that vehicle is spin limit, the ECU will automatically reset most intermittent codes (self heating).

SELF CONFIGURING: During self configuring the ECU will automatically determine the number of sensors and if electronic engine reviewed. The ECU will also determine if the vehicle is traction equipped ONLY if the tractor switch is engaged prior to magnetically self configuring. Missing a magnet prior to the M30T area for 30 seconds complete self configuring.

BLINK CODE ACTIVATION: The ECU will provide more code diagnostics through the use of the dash code switch. Details on active faults, fault history, ECU configuration, and clearing of faults can be found in service data SD-13-4815.
