Blind Source Separation Ganesh R. Naik, Wenwu Wang, 2014-05-21 Blind Source Separation intends to report the new results of the efforts on the study of Blind Source Separation BSS The book collects novel research ideas and some training in BSS independent component analysis ICA artificial intelligence and signal processing applications Furthermore the research results previously scattered in many journals and conferences worldwide are methodically edited and presented in a unified form The book is likely to be of interest to university researchers R Dr Wenwu Wang works at University of Surrey UK

Blind Source Separation Xianchuan Yu, Dan Hu, Jindong Xu, 2013-12-13 A systematic exploration of both classic and contemporary algorithms in blind source separation with practical case studies The book presents an overview of Blind Source Separation a relatively new signal processing method Due to the multidisciplinary nature of the subject the book has been written so as to appeal to an audience from very different backgrounds Basic mathematical skills e g on matrix algebra and foundations of probability theory are essential in order to understand the algorithms although the book is written in an introductory accessible style This book offers a general overview of the basics of Blind Source Separation important solutions and algorithms and in depth coverage of applications in image feature extraction remote sensing image fusion mixed pixel decomposition of SAR images image object recognition fMRI medical image processing geochemical and geophysical data mining mineral resources prediction and geoanomalies information recognition Firstly the background and theory basics of blind source separation are introduced which provides the foundation for the following work Matrix operation foundations of probability theory and information theory basics are included here There follows the fundamental mathematical model and fairly new but relatively established blind source separation algorithms such as Independent Component Analysis ICA and its improved algorithms Fast ICA Maximum Likelihood ICA Overcomplete ICA Kernel ICA Flexible ICA Non negative ICA Constrained ICA Optimised ICA The last part of the book considers the very recent algorithms in BSS e g Sparse Component Analysis SCA and Non negative Matrix Factorization NMF Meanwhile in depth cases are presented for each algorithm in order to help the reader understand the algorithm and its application field A systematic exploration of both classic and contemporary algorithms in blind source separation with practical case studies Presents new improved algorithms aimed at different applications such as image feature extraction remote sensing image fusion mixed pixel decomposition of SAR images image object recognition and MRI medical image processing With applications in geochemical and geophysical data mining mineral resources prediction and geoanomalies information recognition Written by an expert team with accredited innovations in blind source separation and its applications in natural science Accompanying website includes a software system providing codes for most of the algorithms mentioned in the book enhancing the learning experience Essential reading for postgraduate students and researchers engaged in the area of signal processing data mining image processing and recognition information geosciences life sciences Blind Source Separation ,2005 *Principle and Application of*

Blind Source Separation Technology Weihong Fu, 2025-01-31 This book focuses on the principle of blind source separation BSS technology and its application in communication signal processing This book first introduces the basic knowledge of BSS technology and then introduces the whitening pre processing algorithm of BSS and the source signal number estimation technology The principles and implementation steps of various BSS algorithms are introduced in detail and the simulation results of various algorithms are given The application examples and experimental results of BSS technology in communication signal processing are given The detailed derivation and simulation results of BSS algorithm principles are the features of this book which is especially suitable for readers who are interested in learning BSS technology The book can benefit researchers engineers and graduate students in the fields of communications engineering and signal processing

Advances in Modern Blind Signal Separation Algorithms Kostas Kokkinakis, Philipos Loizou, 2010-01-01 With human computer interactions and hands free communications becoming overwhelmingly important in the new millennium recent research efforts have been increasingly focusing on state of the art multi microphone signal processing solutions to improve speech intelligibility in adverse environments One such prominent statistical signal processing technique is blind signal separation BSS BSS was first introduced in the early 1990s and quickly emerged as an area of intense research activity showing huge potential in numerous applications BSS comprises the task of blindly recovering a set of unknown signals the so called sources from their observed mixtures based on very little to almost no prior knowledge about the source characteristics or the mixing structure The goal of BSS is to process multi sensory observations of an inaccessible set of signals in a manner that reveals their individual and original form by exploiting the spatial and temporal diversity readily accessible through a multi microphone configuration Proceeding blindly exhibits a number of advantages since assumptions about the room configuration and the source to sensor geometry can be relaxed without affecting overall efficiency This booklet investigates one of the most commercially attractive applications of BSS which is the simultaneous recovery of signals inside a reverberant naturally echoing environment using two or more microphones In this paradigm each microphone captures not only the direct contributions from each source but also several reflected copies of the original signals at different propagation delays These recordings are referred to as the convolutive mixtures of the original sources The goal of this booklet in the lecture series is to provide insight on recent advances in algorithms which are ideally suited for blind signal separation of convolutive speech mixtures More importantly specific emphasis is given in practical applications of the developed BSS algorithms associated with real life scenarios The developed algorithms are put in the context of modern DSP devices such as hearing aids and cochlear implants where design requirements dictate low power consumption and call for portability and compact size Along these lines this booklet focuses on modern BSS algorithms which address 1 the limited amount of processing power and 2 the small number of microphones available to the end user Table of Contents Fundamentals of blind signal separation Modern blind signal separation algorithms Application of blind signal

processing strategies to noise reduction for the hearing impaired Conclusions and future challenges Bibliography
