Perception and Illusion N.J. Wade, 2006-03-30 Our contact with the world is through perception and therefore the study of the process is of obvious importance and significance For much of its long history the study of perception has been confined to naturalistic observation Nonetheless the phenomena considered worthy of note have not been those that nurture our survival the veridical features of perception but the oddities or departures from the common and commonplace accuracies of perception With the move from the natural world to the laboratory the oddities of perception multiplied and they received ever more detailed scrutiny My general intention is to examine the interpretations of the perceptual process and its errors throughout history The emphasis on errors of perception might appear to be a narrow approach but in fact it encompasses virtually all perceptual research from the ancients until the present The constancies of perception have been taken for granted whereas departures from constancies errors or illusions have fostered fascination

Wade, Michael Swanston, 2013 Vision is our most dominant sense From the light that enters our eyes to the complex cognitive processes that follow we derive most of our information about what things are where they are and how they move from our vision *Computer-Aided Project Management* Spiro N. Pollalis, 2019-06-12 **Visual Perception** Michael T. Swanston, Nicholas J. Wade, 2013-02-01 Vision is our most dominant sense from which we derive most of our information about the world From the light that enters the eye and the processing in the brain that follows we can sense where things are how they move and what they are The first edition of Visual Perception took a refreshingly different approach to perception starting from the function that vision serves for an active observer in a three dimensional environment This fully revised and expanded new edition continues this approach in contrast to the traditional textbook treatment of vision as a catalogue of phenomena Following a general introduction to the main theoretical approaches the authors discuss the historical basis of

our current knowledge Placing the study of vision in its historical context they look at how our ideas have been shaped by art optics biology and philosophy as well as psychology Visual optics and the neurophysiology of vision are also described The core of the book covers the perception of location motion and object recognition There is a new chapter on representation and vision including a section on the perception of computer generated images This readable accessible and truly relevant introduction to the world of perception aims to elicit both independent thought and further study It will be welcomed by students of visual perception and those with a general interest in the mysteries of vision Case Studies Spiro N. Pollalis,1993 Image Pattern Recognition V.A. Kovalevsky,2012-12-06 During the last twenty years the problem of pattern recognition specifically image recognition has been studied intensively by many investigators yet it is far from being solved The number of publications increases yearly but all the experimental results with the possible exception of some dealing with recognition of printed characters report a probability of error significantly higher than that reported for the same images by humans It is widely agreed that ideally the recognition problem could be thought of as a problem in testing statistical hypotheses However in most applications the immediate use of even the simplest statistical device runs head on into grave computational difficulties which cannot be eliminated by recourse to general theory We must accept the fact that it is impossible to build a universal machine which can learn an arbitrary classification of multidimensional signals Therefore the solution of the recognition problem must be based on a priori postulates concerning the sets of signals to be recognized that will narrow the set of possible classifications i e the set of decision functions This notion can be taken as the methodological basis for the approach adopted in this book
