Plastics Process Analysis, Instrumentation, and Control Johannes Karl Fink, 2021-03-30 This book focuses on plastics process analysis instrumentation for modern manufacturing in the plastics industry Process analysis is the starting point since plastics processing is different from processing of metals ceramics and other materials Plastics materials show unique behavior in terms of heat transfer fluid flow viscoelastic behavior and a dependence of the previous time temperature and shear history which determines how the material responds during processing and its end use Many of the manufacturing processes are continuous or cyclical in nature The systems are

flow systems in which the process variables such as time temperature position melt and hydraulic pressure must be controlled to achieve a satisfactory product which is typically specified by critical dimensions and physical properties which vary with the processing conditions Instrumentation has to be selected so that it survives the harsh manufacturing environment of high pressures temperatures and shear rates and yet it has to have a fast response to measure the process dynamics At many times the measurements have to be in a non contact mode so as not to disturb the melt or the finished product Plastics resins are reactive systems The resins will degrade if the process conditions are not controlled Analysis of the process allows one to strategize how to minimize degradation and optimize end use properties Hoover's Handbook of Private Companies Hoover's Incorporated,2007 *Polyolefin Compounds and Materials* Mariam Al-Ali AlMa'adeed,Igor Krupa,2015-12-23 This book describes industrial applications of polyolefins from the researchers perspective Polyolefins constitute today arguably the most important class of polymers and polymeric materials for widespread industrial applications This book summarizes the present state of the art Starting from fundamental aspects such as the polymerization techniques to synthesize polyolefins the book introduces the topic Basic knowledge about polyolefin composites and blends is explained before applications aspects in different industry sectors are discussed The spectrum comprises a wide range of applications and industry sectors such as the packaging and food industry the textile industry automotive and buildings and even biomedical applications Topics which are addressed in the various chapters comprise synthesis and processing of the materials their classification mechanical physical and technical requirements and properties their characterization and many more In the end of the book even the disposal degradation and recycling of polyolefins are addressed and light is shed on their commercial significance and economic value In this way the book follows the entire lifetime of polyolefin compounds and materials from their synthesis and processing over applications to the recycling and reuse of disposed or degraded polyolefin substrates
