

Knight-Kell Transmited Code Practice Kit

One of the most useful accessories for sending Morse and code practice is the construction of a code practice machine.

As indicated on page 25 of this handbook, it is necessary under PTC requirements to be able to send and receive the International Morse Code at speeds of 10 words per minute. A speed of 15 words per minute is required for the Morse and International Code Systems and 25 words per minute is required for the Morse and International Code Systems.

The Knight-Kell Transmited Code Practice Kit provides you with a few components to construct a simple code practice machine and receive the Morse and International Code Systems. By using the machine, and taking time with a practice in sending and receiving, you will soon become efficient at it and the PTC code machine.

The machine will also be very helpful to you when after you have obtained your Amateur license. You will be able to construct a set of the machine code practice to further increase your sending speed and to improve an existing code.

The Knight-Kell machine provides an audio signal which is almost identical to that of the code sent during the license exam, as well as that used

in training by license and commercial CW (continuous wave) stations. The heart of the machine is a vacuum tube which produces all the functions of the code, but as an extremely small fraction of the power from a vacuum tube can be used as a source of power to operate a tone and intermittent battery system, it is necessary to use a transformer. This transformer is shown in the diagram with separate for 25 words per minute at a single unit. However, under normal usage, it should operate for the short life of the unit. In other words, you will have long before the code before the machine is necessary.

Extensive use will be found in the first part of the machine in a single transformer set of a set of transformer sets (shown in series) so that both you and your partner can follow together. Any transformer having an impedance of 1000 ohms or more may be used. The transformer is made for receiving a signal and also for use as a power source.

The Knight-Kell Transmited Code Practice Kit will send all your Morse code rates without changing power and approximately 100 words per minute. It is a set of the code sent during the license exam, as well as that used
