Audi Order Guide 2007:

Evidence-Based Practice in Audiology Lena Wong, Louise Hickson, 2012-02-21 Evidence based practice EBP has proponents in all areas of healthcare and was endorsed in a technical report in 2004 and a position statement in 2005 by the American Speech Language Hearing Association Despite this there is no text on EBP with specific application to audiology It is particularly important in audiology where there are various interventions to assist people with hearing impairment and a growing body of research evidence that needs to be appraised by clinicians and researchers This comprehensive book describes the principles of EBP as they apply to the evaluation of audiologic interventions in children and adults The reader will learn the process of EBP as well as gain knowledge on the evidence relating to specific interventions Evidence Based Practice in Audiology is divided into four sections The first section describes principles of EBP including how to evaluate evidence and how to facilitate evidence based decisions with clients The remaining three sections provide a discussion of the best available evidence about hearing aids cochlear implants and other interventions These three sections contain chapters written by leading international authors who summarize the best available evidence highlight where further evidence is needed and recommend how further evidence should be collected and applied in the clinic The book ends with an appendix that contains recommended measures for the collection of evidence about different audiologic interventions Evidence Based Practice in Audiology is a highly valued resource for students researchers clinical audiologists other health professionals and policy makers For students the book can be used for learning about research methods and about outcomes of interventions for children and adults with hearing impairment For researchers the book provides a useful summary of available research on important topics in habilitation and rehabilitation and may assist them to design future research studies For clinical audiologists the book can help them understand what evidence is and how this can be applied in clinical practice Other health professionals who can benefit from this book include ENTs pediatricians geriatricians GPs nurses and aged care workers The book can also guide policy makers and third party payers in their decisions about allocation of resources The text is written with sufficient information for readers with different backgrounds and experience and careful attention has been paid to presenting complex information in an easy to understand format Evidence Based Practice in Audiology is edited by two leading academics in research in audiologic interventions These editors have a rich clinical experience working with children and adults with hearing impairment and with other health professionals *Revenue Recognition 2016*

Neural Mechanisms of Perceptual Categorization as Precursors to Speech Perception Einat Liebenthal, Lynne E. Bernstein, 2017-05-03 Perceptual categorization is fundamental to the brain's remarkable ability to process large amounts of sensory information and efficiently recognize objects including speech Perceptual categorization is the neural bridge between lower level sensory and higher level language processing A long line of research on the physical properties of the speech signal as determined by the anatomy and physiology of the speech production apparatus has led to descriptions of the acoustic information that is used in speech recognition e g stop consonants place and manner of articulation voice onset time aspiration Recent research has also considered what visual cues are relevant to visual speech recognition i e the visual counter parts used in lipreading or audiovisual speech perception

Much of the theoretical work on speech perception was done in the twentieth century without the benefit of neuroimaging technologies and models of neural representation. Recent progress in understanding the functional organization of sensory and association cortices based on advances in neuroimaging presents the possibility of achieving a comprehensive and far reaching account of perception in the service of language. At the level of cell assemblies, research in animals and humans suggests that neurons in the temporal cortex are important for encoding biological categories. On the cellular level, different classes of neurons, interneurons and pyramidal neurons, have been suggested to play differential roles in the neural computations underlying auditory and visual categorization. The moment is ripe for a research topic focused on neural mechanisms mediating the emergence of speech representations including auditory, visual and even somatosensory based forms. Important progress can be achieved by juxtaposing within the same research topic the knowledge that currently exists, the identified lacunae and the theories that can support future investigations. This research topic provides a snapshot and platform for discussion of current understanding of neural mechanisms underlying the formation of perceptual categories and their relationship to language from a multidisciplinary and multisensory perspective. It includes contributions, reviews, original research, methodological developments pertaining to the neural substrates, dynamics and mechanisms underlying perceptual categorization and their interaction with neural processes governing speech perception.

Human Auditory Evoked Potentials Terence W. Picton, 2010-09-01. This book reviews how we can record the human brain's response to sounds and how we can use these recordings to assess hearing. These recordings are used in many different clinical situations: the identification of hearing impairment in newborn infants, the detection of tumors on the auditory nerve, the diagnosis of multiple sclerosis. As well, they are used to investigate how the brain is able to hear, how we can attend to particular conversations at a cocktail party and ignore others, how we learn to understand the language we are exposed to, why we have difficulty hearing when we grow old. This book is written by a single author with wide experience in all aspects of these recordings. The content is complete in terms of the essentials. The style is clear, equations are absent and figures are multiple. The intent of the book is to make learning enjoyable and meaningful. Allusions are made to fields beyond the ear and the clinical importance of the phenomena is always considered.
