Algebraic Topology Via Differential Geometry London Mathematical Society Lecture Note Series:

Algebraic Topology Via Differential Geometry M. Karoubi, C. Leruste, 1987 In this volume the authors seek to illustrate how methods of differential geometry find application in the study of the topology of differential manifolds Prerequisites are few since the authors take pains to set out the theory of differential forms and the algebra required The reader is introduced to De Rham cohomology and explicit and detailed calculations are present as examples Topics covered include Mayer Vietoris exact sequences relative cohomology Poincaré duality and Lefschetz's theorem This book will be suitable for graduate students taking courses in algebraic topology and in differential topology Mathematicians studying relativity and mathematical physics will find this an invaluable introduction to the techniques of differential geometry

Tensor Geometry C. T. J. Dodson, Timothy Poston, 2013-04-17 This treatment of differential geometry and the mathematics required for general relativity makes the subject of this book accessible for the first time to anyone familiar with elementary calculus in one variable and with a knowledge of some vector algebra

Introduction to Symplectic Topology Dusa McDuff, Dietmar Salamon, 2017-03-16 Over the last number of years powerful new methods in analysis and topology have led to the development of the modern global theory of symplectic topology including several striking and important results The first edition of Introduction to Symplectic Topology was published in 1995 The book was the first comprehensive introduction to the subject and became a key text in the area A significantly revised second edition was published in 1998 introducing new sections and updates on the fast developing area This new third edition includes updates and new material to bring the book right up to date

Introduction to Stable Homotopy Theory David Barnes, Constanze Roitzheim, 2020-03-26 A comprehensive introduction to stable homotopy theory for beginning graduate students from motivating phenomena to current research

Handbook of Geometry and Topology of Singularities I José Luis Cisneros Molina, Dũng Tráng Lê, José Seade, 2020-10-24 This volume consists of ten articles which provide an in depth and reader friendly survey of some of the foundational aspects of singularity theory Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject This is the first volume in a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

Geometry, Topology, and Dynamics in Negative Curvature C. S. Aravinda, F. T. Farrell, J. -F. Lafont, 2016-01-21 The ICM 2010 satellite conference Geometry Topology and Dynamics in Negative Curvature afforded an excellent opportunity to discuss various aspects of this fascinating interdisciplinary subject in which

methods and techniques from geometry topology and dynamics often interact in novel and interesting ways Containing ten survey articles written by some of the leading experts in the field this proceedings volume provides an overview of important recent developments relating to negative curvature Topics covered include homogeneous dynamics harmonic manifolds the Atiyah Conjecture counting circles and arcs and hyperbolic buildings Each author pays particular attention to the expository aspects making the book particularly useful for graduate students and mathematicians interested in transitioning from other areas via the common theme of negative curvature

Geometric Complex Analysis Jisoo Byun,Hong Rae Cho,Sung Yeon Kim,Kang-Hyurk Lee,Jong-Do Park,2018-09-08 The KSCV Symposium the Korean Conference on Several Complex Variables started in 1997 in an effort to promote the study of complex analysis and geometry Since then the conference met semi regularly for about 10 years and then settled on being held biannually The sixth and tenth conferences were held in 2002 and 2014 as satellite conferences to the Beijing International Congress of Mathematicians ICM and the Seoul ICM respectively The purpose of the KSCV Symposium is to organize the research talks of many leading scholars in the world to provide an opportunity for communication and to promote new researchers in this field

Algebraic Topology via Differential Geometry M. Karoubi,C. Leruste,1988-01-07 In this volume the authors seek to illustrate how methods of differential geometry find application in the study of the topology of differential manifolds Prerequisites are few since the authors take pains to set out the theory of differential forms and the algebra required The reader is introduced to De Rham cohomology and explicit and detailed calculations are present as examples Topics covered include Mayer Vietoris exact sequences relative cohomology Pioncare duality and Lefschetz s theorem This book will be suitable for graduate students taking courses in algebraic topology and in differential topology Mathematicians studying relativity and mathematical physics will find this an invaluable introduction to the techniques of differential geometry

Topics in Noncommutative Geometry Guillermo Cortiñas,2012 Luis Santalo Winter Schools are organized yearly by the Mathematics Department and the Santalo Mathematical Research Institute of the School of Exact and Natural Sciences of the University of Buenos Aires FCEN This volume contains the proceedings of the third Luis Santalo Winter School which was devoted to noncommutative geometry and held at FCEN July 26 August 6 2010 Topics in this volume concern noncommutative geometry in a broad sense encompassing various mathematical and physical theories that incorporate geometric ideas to the study of noncommutative phenomena It explores connections with several areas including algebra analysis geometry topology and mathematical physics Bursztyn and Waldmann discuss the classification of star products of Poisson structures up to Morita equivalence Tsygan explains the connections between Kontsevich s formality theorem noncommutative calculus operads and index theory Hoefel presents a concrete elementary construction in operad theory Meyer introduces the subject of $\mathcal{C}$ algebraic crossed products Rosenberg introduces Kasparov s KK theory and noncommutative tori and includes a discussion of the Baum Connes conjecture for K theory of crossed products among other topics Lafont Ortiz and Sanchez Garcia carry out a concrete

computation in connection with the Baum Connes conjecture Zuk presents some remarkable groups produced by finite automata Mesland discusses spectral triples and the Kasparov product in KK theory Trinchero explores the connections between Connes noncommutative geometry and quantum field theory Karoubi demonstrates a construction of twisted K theory by means of twisted bundles Tabuada surveys the theory of noncommutative motives *Mathematical Aspects of Quantum Field Theories* Damien Calaque, Thomas Strobl, 2015-01-06 Despite its long history and stunning experimental successes the mathematical foundation of perturbative quantum field theory is still a subject of ongoing research This book aims at presenting some of the most recent advances in the field and at reflecting the diversity of approaches and tools invented and currently employed Both leading experts and comparative newcomers to the field present their latest findings helping readers to gain a better understanding of not only quantum but also classical field theories Though the book offers a valuable resource for mathematicians and physicists alike the focus is more on mathematical developments This volume consists of four parts The first Part covers local aspects of perturbative quantum field theory with an emphasis on the axiomatization of the algebra behind the operator product expansion The second Part highlights Chern Simons gauge theories while the third examines semi classical field theories In closing Part 4 addresses factorization homology and factorization algebras
