Lojda,R. Gossrau,T.H. Schiebler,2012-12-06 During recent years enzyme histochemical reactions have increasingly been considered as important the reason being that enzyme histo chemistry is now a well established link between morphology and bio chemistry The development of numerous new methods and in particular the improvement of existing techniques contributed to the expansion of enzyme histochemical

reactions Today the use of these methods allows detailed insight into molecular processes of single cells and their constituents The selection of a suitable method for enzyme histochemical investigations needs thorough knowledge and critical evaluation of the reactions described for the histochemical demonstration of enzymes and introduced in laboratory practice Often it is difficult for scientists primarily concerned with the application of methods and for laboratory assistants to comment on the value of an enzyme histochemical reaction Our book will serve as a guide in this respect It contains the most important histochemical methods for the localization of enzymes all of which were checked by the authors themselves These methods were often modified and frequently used for numerous different investigations of healthy and diseased organs in basic research and in routine practice

Azzi, U. Brodbeck, P. Zahler, 2012-12-06 This manual follows at a distance of 3 years the previous one entitled *Membrane Proteins* and like its predecessor it is the result of an International Advanced Course sponsored by FEBS SKMB and SNG which was held in Bern in September 1983 The experiments offered to the students in the course had to be largely up dated or chosen from new areas of membrane research because of the substantial and rapid development of the field Using the protocols of the course the participants graduate students postdoctoral fellows and also senior scientists in most cases not at all expert in biomembrane research were able to repeat all the experiments successfully Those few protocols which for some reason did not fulfill the role we expected were modified These protocols have now been collected in this manual which we are able to offer to a number of biology biochemistry and biophysics laboratories hoping that the selected number of methods which have been successfully used during the Advanced Course may be useful to them This manual is also intended for teachers of practical classes who may use it as a text book and as source of selected references collected not in the library but in the laboratory from the notebooks of the young researchers who have contributed so much to the success of the Course
