Assessment and Monitoring of Human Movement Cristian Romagnoli, Giuseppe Annino, Elvira

Padua, Vincenzo Bonaiuto, 2025-10-03 Human movement studies have long involved researchers from various scientific disciplines such as biomechanics functional anatomy physiology and neuroscience in responding to the growing demand in sports science for reliable and accurate methods and tools for monitoring and evaluating physical performance Accurately measuring body movement data i e walking running throwing swimming and paddle stroke is useful for identifying biomechanical and kinetics and physiological and metabolic variables However the transition of functional assessment of physical activity with accurate and reliable data from the laboratory to the daily life environment has been complex Thanks to technological innovation miniaturized and wearable sensors can non invasively measure and monitor kinematic and dynamic data related to the performance of a specific sport of physical activity broadening their application in the clinical field such as monitoring and improving patient care directly at home or at a distance Therefore the quantitative analysis of human movement is a necessary and effective tool that helps transversally both the medical physical fitness and wellness and the purely competitive environment linked to high level sport
