United States and abroad      **Technology assessment using biometrics for border security.** ,2002      Biometric Inverse Problems Svetlana N. Yanushkevich, Adrian Stoica, Vlad P. Shmerko, Denis V. Popel, 2018-10-08 Traditional methods of biometric analysis are unable to overcome the limitations of existing approaches mainly due to the lack of standards for input data privacy concerns involving use and storage of actual biometric data and unacceptable accuracy Exploring solutions to inverse problems in biometrics transcends such limits and allows rich analysis of biometric information and systems for improved performance and testing Although some particular inverse problems appear in the literature until now there has been no comprehensive reference for these problems *Biometric Inverse Problems* provides the first comprehensive treatment of biometric data synthesis and modeling This groundbreaking reference comprises eight self contained chapters that cover the principles of biometric inverse problems basics of data structure design new automatic synthetic signature fingerprint and iris design synthetic faces and DNA and new tools for biometrics based on Voronoi diagrams Based on the authors vast experience in the field the book authoritatively examines new approaches and methodologies in both direct and inverse biometrics providing invaluable analytical and benchmarking tools The authors include case studies examples and implementation codes for practical illustration of the methods Loaded with approximately 200 figures 60 problems 50 MATLAB code fragments and 200 examples *Biometric Inverse Problems* sets the standard for innovation and authority in biometric data synthesis modeling and analysis      *Guide to Biometrics* Ruud M. Bolle, Jonathan H. Connell, Sharath Pankanti, Nalini K. Ratha, Andrew W. Senior, 2013-06-29 Starting with fingerprints more than a hundred years ago there has been ongoing research in biometrics Within the last forty years face and speaker recognition have emerged as research topics However as recently as a decade ago biometrics itself did not exist as an independent field Each of the biometric related topics grew out of different disciplines For example the study of fingerprints came from forensics and pattern recognition speaker recognition evolved from signal processing the beginnings of face recognition were in computer vision and privacy concerns arose from the public policy arena One of the challenges of any new field is to state what the core ideas are that define the field in order to provide a research agenda for the field and identify key research problems Biometrics has been grappling with this challenge since the late 1990s With the maturation of biometrics the separate biometrics areas are coalescing into the new discipline of biometrics The establishment of biometrics as a recognized field of inquiry allows the research community to identify problems that are common to biometrics in general It is this identification of common problems that will define biometrics as a field and allow for broad advancement      *Biometrics* Joseph Pugliese, 2012-12-06 Biometric technologies such as finger or facial scan are being deployed across a variety of social contexts in order to facilitate and guarantee identity verification and authentication In the post 9 11 world biometric technologies have experienced an extraordinary period of growth as concerns about security and screening have increased This book analyses biometric systems in terms of the application of biopolitical power corporate military and governmental on the human body It

deploys cultural theory in examining the manner in which biometric technologies constitute the body as a target of surveillance and as a data information object The book thereby provides a comprehensive overview and critical analysis of both the local and global ramifications of biometric technologies      Identification and Registration Practices in Transnational Perspective J. Brown,I. About,G. Lonergan,2013-07-29 This collection examines the subject of identification and surveillance from 16th C English parish registers to 21st C DNA databases The contributors who range from historians to legal specialists provide an insight into the historical development behind such issues as biometric identification immigration control and personal data use      **Securing Biometrics Applications** Charles A. Shoniregun,Stephen Crosier,2008-03-06 Biometrics is becoming increasingly common in establishments that require high security such as state security and financial sectors The increased threat to national security by terrorists has led to the explosive popularity of biometrics Biometric devices are now available to capture biometric measurements such as fingerprints palm retinal scans keystroke voice recognition and facial scanning However the accuracy of these measurements varies which has a direct relevance on the levels of security they offer With the need to combat the problems related to identify theft and other security issues society will have to compromise between security and personal freedoms *Securing Biometrics Applications* investigates and identifies key impacts of biometric security applications while discovering opportunities and challenges presented by the biometric technologies available      *Transparent User Authentication* Nathan Clarke,2011-08-17 This groundbreaking text examines the problem of user authentication from a completely new viewpoint Rather than describing the requirements technologies and implementation issues of designing point of entry authentication the book introduces and investigates the technological requirements of implementing transparent user authentication where authentication credentials are captured during a user s normal interaction with a system This approach would transform user authentication from a binary point of entry decision to a continuous identity confidence measure Topics and features discusses the need for user authentication reviews existing authentication approaches introduces novel behavioural biometrics techniques examines the wider system specific issues with designing large scale multimodal authentication systems concludes with a look to the future of user authentication      Infrastructure Security George Davida,Yair Frankel,Owen Rees,2003-06-30 Infrastructure Security Conference 2002 InfraSec 2002 was created to promote security research and the development of practical solutions in the security of infrastructures both government and commercial such as the effective prevention of detection of reporting of response to and recovery from security incidents The conference sponsored by the Datacard Group and Hewlett Packard Laboratories was held on October 1 3 2002 Organizational support was provided by the Center for Cryptography Computer and Network Security Center at the University of Wisconsin Milwaukee Organizing a conference is a major undertaking requiring the efforts of many individuals The Conference President Graham Higgins Datacard Group oversaw all arrangements for the conference and the General Chair Susan Thompson Datacard Group oversaw the local organization and

registration Local arrangements were directed by Jan Ward Hewlett Packard Laboratories and Jamie Wilson Datacard Group Financial arrangements were managed by Natalie Churchill Hewlett Packard Laboratories We wish to thank the organizers without whose support this conference would not have been possible This conference program included two keynote speakers Bob Evans Office of the e Envoy and Vic Maconachy Department of Defense The program committee considered 44 submissions of which 23 papers were accepted Each submitted paper was reviewed by a minimum of three referees These proceedings contain revised versions of the accepted papers Revisions were not checked and the authors bear full responsibility for the content of their papers
