Building IBM Shaping An Industry And Its Technology History Of Computing:

Building IBM Emerson W. Pugh, 2009-01-23 No company of the twentieth century achieved greater success and engendered more admiration respect envy fear and hatred than IBM Building IBM tells the story of that company how it was formed how it grew and how it shaped and dominated the information processing industry Emerson Pugh presents substantial new material about the company in the period before 1945 as well as a new interpretation of the postwar era Granted unrestricted access to IBM's archival records and with no constraints on the way he chose to treat the information they contained Pugh dispels many widely held myths about IBM and its leaders and provides new insights on the origins and development of the computer industry Pugh begins the story with Herman Hollerith's invention of punched card machines used for tabulating the U S Census of 1890 showing how Hollerith's inventions and the business he established provided the primary basis for IBM He tells why Hollerith merged his company in 1911 with two other companies to create the Computing Tabulating Recording Company which changed its name in 1924 to International Business Machines Thomas J Watson who was hired in 1914 to manage the merged companies exhibited remarkable technological insight and leadership in addition to his widely heralded salesmanship to build Hollerith's business into a virtual monopoly of the rapidly growing punched card equipment business The fascinating inside story of the transfer of authority from the senior Watson to his older son Thomas J Watson Jr and the company's rapid domination of the computer industry occupy the latter half of the book In two final chapters Pugh examines conditions and events of the 1970s and 1980s and identifies the underlying causes of the severe problems IBM experienced in the 1990s

History of Computing in Education J.A.N. Lee, John Impagliazzo, 2006-04-11 This work derives from a conference discussing the history of computing in education This conference is the first of hopefully a series of conferences that will take place within the International Federation for Information Processing IFIP and hence we describe it as the First Conference on the History of Computing in Education HCE1 These proceedings represent a collection of works presented at the HCE1 Conference held in association with the IFIP 2004 World Computer Congress held in Toulouse France

Contributions to this volume range from a wide variety of educational perspectives and represent activities from four continents The HCE1 conference represents a joint effort of the IFIP Working Group 9.7 on the History of Computing and the IFIP Technical Committee 3 on Education The HCE1 Conference brings to light a broad spectrum of issues and spans four continents It illustrates topics in computing education as they occurred in the early days of computing whose ramifications or overtones remain with us today Indeed many of the early challenges remain part of our educational tapestry most likely many will evolve into future challenges Therefore this work provides additional value to the reader as it will reflect in part the future development of computing in education to stimulate new ideas and models in educational development

Making Computers Accessible Elizabeth R. Petrick, 2015-06-01 The revolution in accessible computer technology was fueled by disability activism the interactive nature of personal computers and changing public policy In 1974 not long after developing the first universal optical character recognition technology Raymond Kurzweil struck up a conversation with a blind man on a flight Kurzweil explained that he was searching for a use for his new software The blind man expressed interest One of the frustrating obstacles that blind people grappled with he said was that no computer program could translate text into speech Inspired by this chance meeting

Kurzweil decided that he must put his new innovation to work to overcome this principal handicap of blindness. By 1976 he had built a working prototype which he dubbed the Kurzweil Reading Machine. This type of innovation demonstrated the possibilities of computers to dramatically improve the lives of people living with disabilities. In *Making Computers Accessible* Elizabeth R. Petrick tells the compelling story of how computer engineers and corporations gradually became aware of the need to make computers accessible for all people. Motivated by user feedback and prompted by legislation such as the Americans with Disabilities Act which offered the promise of equal rights via technological accommodation, companies developed sophisticated computerized devices and software to bridge the accessibility gap. People with disabilities, Petrick argues, are paradigmatic computer users demonstrating the personal computer's potential to augment human abilities and provide for new forms of social, professional, and political participation. Bridging the history of technology, science, and technology studies and disability studies, this book traces the psychological, cultural, and economic evolution of a consumer culture aimed at individuals with disabilities who increasingly rely on personal computers to make their lives richer and more interconnected.

American Business Since 1920 Thomas K. McCraw, William R. Childs, 2017-11-30 Tells the story of how America's biggest companies began, operated, and prospered post World War I. This book takes the vantage point of people working within companies as they responded to constant change created by consumers and technology. It focuses on the entrepreneur, the firm, and the industry by showing from the inside how businesses operated after 1920 while offering a good deal of Modern American social and cultural history. The case studies and contextual chapters provide an in-depth understanding of the evolution of American management over nearly 100 years. *American Business Since 1920: How It Worked* presents historical struggles with decision making and the trend towards relative decentralization through stories of extraordinarily capable entrepreneurs and the organizations they led. It covers Henry Ford and his competitor Alfred Sloan at General Motors during the 1920s; Neil McElroy at Procter & Gamble; Ferdinand Eberstadt at the government's Controlled Materials Plan during World War II; David Sarnoff at RCA in the 1950s and 1960s; and Ray Kroc and his McDonald's franchises in the late twentieth century and early twenty-first and more. It also delves into such modern success stories as Amazon.com, eBay, and Google. Provides deep analysis of some of the most successful companies of the 20th century. Contains topical chapters covering titans of the 2000s. Part of Wiley-Blackwell's highly praised American History Series. *American Business Since 1920: How It Worked* is designed for use in both basic and advanced courses in American history at the undergraduate and graduate levels.

The Early Computer Industry A. Gandy, 2012-11-30 Uses case studies to explore why large-scale electronics failed to win a leadership position in the early computer industry and why IBM, a firm with a heritage in the business machines industry, succeeded. The cases cover both the US and the UK industry, focusing on electronics giants GE, RCA, English Electric, EMI, and Ferranti.
