Evolution, Politics and Charisma Elesa Zehndorfer, 2019-02-25 Evolution Politics and Charisma Why do Populists Win shines compelling new light on the way in which the systematic targeting and manipulation of human physiology remain a cornerstone of all populist political campaigns Readers wishing to make sense of the populist juggernauts of Trump and Brexit and of the cyclical and formulaic nature of the rise and fall of charismatic populism will find this book particularly appealing Elesa Zehndorfer begins by presenting a highly applied explanation of the critical importance of political physiology physiology theory neuroscience and evolutionary biology in populist charismatic politics She later eloquently explains how manipulation of physiological variables such as heightened testosterone and dopamine renders the political rally one of the most powerful weapons in a populist leaders campaign Weber s seminal conceptualisation of charisma in statu nascendi and Hyman Minsky s insightful theories of cyclical boom and bust scenarios are then juxtaposed alongside

physiological theory to greatly amplify our understanding of the powerful biological antecedents of charismatic populism. These theoretical observations are then applied directly to recent high profile populist campaigns including the 2016 Trump Presidential campaign and early Presidency and the Brexit referendum to elucidating and compelling effect. Ultimately *Evolution Politics and Charisma* paints a clear evolutionary picture of the way in which politics is an emotional not a rational process where our emotions are continually targeted to great and strategic effect and where the most recent intersection of technology and physiology has driven the greatest surge in populism ever seen across the Western hemisphere since the 1930 s. Acknowledging this reality opens up exciting vistas in our understanding of the true power of charismatic populism and provides answers as to how its seductive and often dangerous power can be effectively resisted.

Literary Twinship from Shakespeare to the Age of Cloning Wieland Schwanebeck, 2020-01-06 Unlike previous efforts that have only addressed literary twinship as a footnote to the doppelganger motif this book makes a case for the complexity of literary twinship across the literary spectrum. Shortlisted for the ESSE Book Award 2022 *Literatures in the English Language* it shows how twins have been instrumental to the formation of comedies of mistaken identity the detective genre and dystopian science fiction. The individual chapters trace the development of the category of twinship over time demonstrating how the twin was repeatedly re-invented as a cultural and pathological type when other discursive fields constituted themselves and how its literary treatment served as the battleground for ideological disputes by setting the stage for debates regarding kinship and reproduction or by partaking in discussions of criminality eugenic greatness and monstrous births. The book addresses nearly 100 primary texts including works of Mary Elizabeth Braddon Wilkie Collins Charles Dickens Arthur Conan Doyle Aldous Huxley Christopher Priest William Shakespeare and Zadie Smith.

Now with new chapters on authoritarianism nationalism status hierarchies and minority political identities along with updated material this is an essential reference for scholars and students interested in the intersection of the two fields.

Politics in the Laboratory Ira H. Carmen, 2004 Ira Carmen seeks a fusion of experimental biological research and political science research as he explores the important and controversial realm of human genomics. *Politics in the Laboratory* takes a close look at the ethical legal social constitutional and political implications of modern biological research. It addresses both biopolicy issues and basic science including cloning embryonic stem cell investigations and experimentation involving the human germline from the perspective of a political scientist.
