Neubauer,2012 This book examines how humans evolved from the cosmos and prebiotic earth and what types of biological chemical and physical sciences drove this complex process The author presents his view of nature which attributes the rising complexity of life to the continual increasing of information content first in genes and then in brains *Biology* Neil A. Campbell,Jane B. Reece,2005 Neil Campbell and Jane Reece s BIOLOGY remains unsurpassed as the most successful majors biology textbook in the world This text has invited more than 4 million students into the study of this dynamic and essential discipline The authors have restructured each chapter around a conceptual framework of five or six big ideas An Overview draws students in and sets the stage for the rest of the chapter each numbered Concept Head announces the beginning of a new concept and Concept Check questions at the end of each chapter encourage students to assess their mastery of a given concept New Inquiry Figures focus students on the experimental process and new Research Method Figures illustrate important techniques in biology Each chapter ends with a Scientific Inquiry Question that asks students to apply scientific investigation skills to the content of the chapter Biological Computation Ehud Lamm,Ron Unger,2011-05-25 The area of biologically inspired computing or biological computation involves the development of new biologically based techniques for solving difficult computational problems A unified overview of computer science ideas inspired by biology Biological Computation presents the most fundamental and significant concepts in this area In the book students discover that bacteria communicate that DNA can be used for performing computations how evolution solves optimization problems that the way ants organize their nests can be applied to solve clustering problems and what the human immune system can teach us about protecting computer networks The authors discuss more biological examples such as these along with the computational techniques developed from these scenarios The text focuses on cellular automata evolutionary computation neural networks and molecular computation Each chapter explores the biological background describes the computational techniques gives examples of applications discusses possible variants of the techniques and includes exercises and solutions The authors use the examples and exercises to illustrate key ideas and techniques Clearly conveying the essence of the major computational approaches in the field this book brings students to the point where they can either produce a working implementation of the
