Bioprocess Engineering Lab Manual:

Biochemical Engineering Debabrata Das, Debayan Das, 2021-01-10 Biochemical engineering mostly deals with the most complicated life systems as compared with chemical engineering. A fermenter is the heart of biochemical processes. It is essential to operate a system properly. A description of enzymatic reaction kinetics is followed by cell growth kinetics to determine several kinetic parameters. Operations and analyses of several biochemical processes are included to determine their special. The book also covers the determination of several operational parameters such as volumetric mass transfer coefficient, mixing time, death rate constant, chemical oxygen demand, and heat of combustion. This book provides a novel description of the experimental protocol to find out several operational parameters of biochemical processes. A comprehensive collection of numerous experiments based on fundamentals; it focuses on the determination of not only the characteristics of raw materials but also other essential parameters required for the operation of biochemical processes. It also emphasizes the applicability of the analysis to various processes. Equipped with illustrative diagrams, neat flowcharts, and exhaustive tables, the book is ideal for young researchers, teachers, and scientists working towards developing a solid understanding of the experimental aspects of biochemical engineering. *Laboratory Manual on Biotechnology* P. Bioprocess Engineering Bjorn K. Lydersen,Nancy A. D'Elia,Kim L. Nelson,1994-04-18 Divided into four sections the first and third reflect the fact that there are two types of equipment required in the plant one in which the actual product is synthesized or processed such as the fermentor centrifuge and chromatographic columns and the other that supplies support for the facility or process including air conditioning water and waste systems Part two describes such components as pumps filters and valves not limited to a certain type of equipment Lastly it covers planning and designing the entire facility along with requirements for containment and validation of the process

Ramírez,2013-06-29 Bioprocess engineering plays a key role in the development and optimization of bioprocesses leading to the products of biotechnology A survey of the state of the art in this field is greatly needed This work covers all the essential sub areas and as such is required reading for scientists active in all the disciplines involved in bioprocess engineering This review of basic and applied approaches is brought together by a broad international group of expert authors The work is a reflection of the First International Symposium on Bioprocess Engineering June 1994 However it must be emphasized that the book cannot be perceived as a regular symposium proceedings volume a strict peer review process assures the readers of a high level of quality more than a quarter of the work consists of invited contributions while less than half of the spontaneously submitted manuscripts were accepted for publication Advances in Bioprocess Engineering belongs among the indispensable set of instruments of today s researcher in this field

Isolation screening and selection of Aspergillus niger cultures for citric acid fermentation Prem Jose Vazhacharickal,John Joseph,Sooraj S Nair ,2017-11-21 The present study deal with the isolation screening and selection of Aspergillus niger cultures for citric acid fermentation The organism was isolated from onion and garlic peels which were

collected from local market Pour plate method using Czapek Dox Agar medium was used for isolation The agar plates were incubated at room temperature for 7 days Maximum sporulation were obtained and then stored in a refrigerator at 4 C for maintenance and further screening for citric acid fermentation The cultural conditions and nutritional requirements for citric acid production by the selected culture were optimized in 250 ml Erlenmeyer flasks by submerged mould culture technique prior to scale up studies in a stirred fermenter Two types of fermentation were succeeded they are solid and submerged state fermentation In solid state fermentation basal medium for citric acid production were prepared in 7 conical flasks of about 100 ml each containing 30 g of samples like wastes of apple pineapple carrot beetroot sugarcane mosambi and grape and whereas in submerged state fermentation basal medium The basal medium for citric acid production were prepared in 2 conical flask of about 100 ml each containing 15 ml of samples like date syrup and sugarcane juice were added in 2 conical flasks and 3.5 g of corn flour was also taken in separate flask containing the same amount of basal medium These samples were then sterilized in an autoclave for 121 C for 15 lbs at 15 mins These samples were cooled down and were inoculated with *Aspergillus niger* isolates which were obtained from Czapek Dox Agar medium These flasks were then kept for incubation at room temperature for further studies This comparative study of citric acid production in various medium were studied at each intervals up to 14 days of incubation Pineapple and date syrup have shown an extreme citric acid production when compared to other samples
