

User Manual Critique

I used the following criteria to critique this manual, audience recognition, components of instructions, safety instructions, instructional steps and finally graphics and videos. The first criteria I used is audience recognition. This manual is written for landscape professionals who have some experience using this type of machinery in the past. The terminology that is used throughout the manual suggests that the user knows what the overall operation of the machine is for.

This is a good idea because if the machine is not used properly it could have the potential to be dangerous, causing injury or even death. This is also a problem because if someone is not familiar with the machine and attempts to use it the manual could confuse them, and they may not assemble the machine correctly, and not follow all the safety warnings that are in the manual. This could also be a dangerous situation since the chemicals that are used in conjunction with the machine could be hazardous.

The second criteria I chose is the components and instructions of the manual. The first page shows a general overview of the sprayer with pictures of specific parts of the machine. One problem with the main page is that it said that there was a search option but I never found that option in any part of the manual. The introduction page gives a brief overview of the manual and points out potential hazards associated with the machine and identifies signal words throughout the manual such as danger, warning, caution and important and their context in the manual.

It is laid out with a table of contents and each header in the table has sub-headings that are all hyperlinked to the correct page of the manual and navigation is fairly easy throughout the sections. The table of contents is also presented in a logical order, starting with the introduction all the way through setting up and operating the machine, and finally ending with warranty and contact information. The third criteria I chose is safety instructions. This piece of machinery deals with the spraying of chemicals and therefore if not used properly can cause harm to the user or people around the area.

The safety section of the manual goes over all the precautions that need to be followed when dealing with chemicals, such as wearing the proper safety gear when using the machine. Each sub-section has clearly laid out the steps required to prepare, use, and maintain the sprayer in a safe manner. One thing I noticed is there are no links to the Occupational Safety and Health Administration (OSHA) website which could have even more detailed safety information for the use of chemicals. The fourth criteria I chose was instructional steps.

The manual has detailed instructions on how to setup the sprayer for use. It goes through
