Bioreactor Immobilized Enzymes And Cells Fundamentals And Applications:

Bioreactor Immobilized Enzymes and Cells Murray Moo-Young, 1988-01-11 Immobilized Biosystems I.A. Veliky, R.J.C. McLean, 2012-12-06 This book provides an overview of the immobilization of viable and non viable cells proteins enzymes and active molecules and their interaction with natural or synthetic carriers for performing biochemical and chemical reactions in vivo and in vitro

Interfacial Phenomena and Bioproducts John Brash, 1996-08-16 Presents a synopsis of the theoretical principles and practical experience concerning the interfacial behaviour of bioproducts The volume offers an interdisciplinary approach to the subject that highlights the importance of interfacial phenomena in bioprocessing systems and the tools used to study and interpret the phenomena It contains coverage ranging from fundamentals of bioproduct and solid surface structure to the interactions of multicomponent mixtures in heterogeneous

Multiphase Bioreactor Design Joaquim M.S. Cabral, Manuel Mota, Johannes Tramper, 2001-09-20 Bioreaction engineering is fundamental to the optimization of biotechnological processes and the production of biochemicals by enzymes microbial plant and animal cells and higher organisms A reference text for postgraduate students and researchers in biochemical engineering and bioreactor design

Microbial Enzymes and Biotechnology W.M. Fogarty, C.T. Kelly, 2012-12-06 Biotechnology is now one of the major growth areas in science and engineering and within this broad discipline enzyme technology is one of the areas earmarked for special and significant developments This publication is the second edition of *Microbial Enzymes and Biotechnology* which was originally published in 1983 In this edition the editors have attempted to bring together accounts by the relevant experts of the current status of the major areas of enzyme technology and specifically those areas of actual and or potential commercial importance Although the use of microbial enzymes may not have expanded at quite the rate expected a decade ago there is nevertheless intense activity and considerable interest in the whole area of enzyme technology Microbial enzymes have been used in industry for many centuries although it is only comparatively recently that detailed knowledge relating to their nature properties and function has become more evident Developments in the 1960s gave a major thrust to the use of microbial enzymes in industry The commercial success of alkaline proteases and amyloglucosidases formed a bed rock for subsequent research and development in the area

Biological Resource Management Connecting Science and Policy Ervin Balazs, Ennio Galante, James M. Lynch, James S. Schepers, Jean-Pierre Toutant, Dietrich Werner, P.A.T.J. Werry, 2013-03-14 Jointly published with INRA Paris The application of new production methods in the food industry genetic engineering in plants and animals as well as recent crises over food borne diseases have led consumers to a growing concern about science as an appropriate basis for developing sound agricultural policies This book presents the discussion of scientists and politicians in the framework of an OECD programme conference on how to restore public trust in the application of new scientific achievements concerning food production

Enzymes in the Environment Richard G. Burns, Richard P. Dick, 2002-01-29

The need to understand the biological processes that are important for essential aquatic and terrestrial ecosystem function has prompted much research into the field of ecological enzymology. This book presents the two broad areas of application in a compilation of reviews by 21 international experts in their respective fields. The first explores enzymatic activities to assess the processes or mechanisms that operate in a given system such as the rhizosphere, plant leaves and shoots, soil surfaces and biofilms. The second considers enzymes or microbial cells as sensors to detect microbial activity and stresses due to pollution, management or climatic change in both aquatic and terrestrial ecosystems.

Cell Encapsulation Technology and Therapeutics Willem M. Kühtreiber, Robert P. Lanza, William L. Chick, 2013-12-01. The concept of using encapsulation for the immunoprotection of transplanted cells was introduced for the first time in the 1960s. Microencapsulated cells might be protected from destruction and from participation in immunological processes while the enclosing membrane would be permeable to small molecules of specific cellular product which could then enter the general extracellular compartment of the recipient. For instance, encapsulated endocrine cells might survive and maintain an effective supply of hormone. Chang Ph.D. Thesis McGill University 1965. Chang et al. Can J Physiol Pharmacol 44: 115-128, 1966. We asked Connaught Laboratories Ltd in Toronto to put this concept into practice. In 1980, Lim and Sun from Connaught Laboratories reported on the successful implantation of poly-L-lysine alginate encapsulated rat islets into a foreign host. Lim and Sun Science 210: 908-909, 1980. Now many groups around the world are making tremendous progress in the encapsulation of a multitude of cell types. Kühtreiber, Lanza and Chick have invited many cell encapsulation groups from around the world to contribute to this book. The result is a very useful reference book in this rapidly growing area. With so many excellent authors describing in detail the different areas of cell encapsulation, my role here will be to briefly discuss a few points.

Stability and Stabilization of Biocatalysts F.J. Plou, J.L. Iborra, P.J. Halling, 1998-11-10. Six years after the symposium on Stability and Stabilization of Enzymes, a second symposium, Stability and Stabilization of Biocatalysts, on which this book is based, was organized. At the symposium, 210 participants representing all continents came together to learn from 150 oral and poster communications. The volume brings up to date the work already going on and identifies possible breakthroughs in the research. This timely book therefore presents cutting edge developments in topics such as non-covalent processes in solution, protein engineering and thermophile enzymes, immobilized enzymes, non-conventional media and whole cells. An excellent addition to the available literature, it will make a useful contribution to this key area of applied biocatalysis.

Current Catalog National Library of Medicine (U.S.), First multi-year cumulation covers six years 1965-70.
