

# Grids & Ground Lines

The package is built in a 100mm three-dimensional grid, which becomes the master vehicle grid system throughout the project's life. This XYZ grid is created by the intersections of a series of horizontal, longitudinal and lateral planes. The grid reference system is used as a reference between the CAD (computer-aided design) models (or drawings) and the clay models. The location of the vehicle components and section cutting planes are also referenced to the grid.

GRID ORIGIN POINT

- X = 0 The GRID ORIGIN POINT should be located out in front of the bumper and below the ground. Once created, it will always remain in the same place relative to the package. If the ground line is modified and pushed away from the body or the front fascia is moved forward, they will not move to a "minus" grid coordinate.
- Y = 0
- Z = 0

Feedback Control of Dynamic Bipedal Robot

Locomotion Eric R. Westervelt, Jessy W. Grizzle, Christine Chevallereau, Jun Ho Choi, Benjamin Morris, 2018-10-03 Bipedal

locomotion is among the most difficult challenges in control engineering Most books treat the subject from a quasi static perspective overlooking the hybrid nature of bipedal mechanics Feedback Control of Dynamic Bipedal Robot Locomotion is the first book to present a comprehensive and mathematically sound treatment of feedback design for achieving stable agile and efficient locomotion in bipedal robots In this unique and groundbreaking treatise expert authors lead you systematically

through every step of the process including Mathematical modeling of walking and running gaits in planar robots Analysis of periodic orbits in hybrid systems Design and analysis of feedback systems for achieving stable periodic motions Algorithms for synthesizing feedback controllers Detailed simulation examples Experimental implementations on two bipedal test beds The elegance of the authors approach is evident in the marriage of control theory and mechanics uniting control based presentation and mathematical custom with a mechanics based approach to the problem and computational rendering Concrete examples and numerous illustrations complement and clarify the mathematical discussion A supporting Web site offers links to videos of several experiments along with MATLAB code for several of the models This one of a kind book builds a solid understanding of the theoretical and practical aspects of truly dynamic locomotion in planar bipedal robots
