Boolean Functions And Computation Models:

Boolean Functions and Computation Models Peter Clote, Evangelos Kranakis, 2002-09-19 The two internationally renowned authors elucidate the structure of fast parallel computation Its complexity is emphasised through a variety of techniques ranging from finite combinatorics probability theory and finite group theory to finite model theory and proof theory Non uniform computation models are studied in the form of Boolean circuits uniform ones in a variety of forms Steps in the investigation of non deterministic polynomial time are surveyed as is the complexity of various proof systems Providing a survey of research in the field the book will benefit advanced undergraduates and graduate students as well as researchers

Models for Parallel and Distributed Computation R. Correa, Ines de Castro Dutra, Mario Fiallos, Luiz Fernando Gomes da Silva, 2013-06-29 Parallel and distributed computation has been gaining a great lot of attention in the last decades During this period the advances attained in computing and communication technologies and the reduction in the costs of those technologies played a central role in the rapid growth of the interest in the use of parallel and distributed computation in a number of areas of engineering and sciences Many actual applications have been successfully implemented in various platforms varying from pure shared memory to totally distributed models passing through hybrid approaches such as distributed shared memory architectures Parallel and distributed computation differs from classical sequential computation in some of the following major aspects the number of processing units independent local clock for each unit the number of memory units and the programming model For representing this diversity and depending on what level we are looking at the problem researchers have proposed some models to abstract the main characteristics or parameters physical components or logical mechanisms of parallel computers The problem of establishing a suitable model is to find a reasonable trade off among simplicity power of expression and universality Then be able to study and analyze more precisely the behavior of parallel applications
