produced completely automatically This book is organized into 11 parts encompassing 34 chapters that specifically tackle the
topics of deductive synthesis program transformations program verification and programming tutors The opening parts
provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and
specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose
development has be designed for the programming domain The subsequent parts present generalized program
transformation systems the problems involved in using natural language input the features of very high level languages and
the advantages of the programming by example system Other parts explore the intelligent assistant approach and the
significance and relation of programming knowledge in other programming system The concluding parts focus on the
features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and
