Artificial Intelligence Search Methods In Prolog:

Artificial Intelligence Christopher Thornton, 2007 This innovative book on artificial intelligence AI uses the unifying thread of search to bring together the major application and modeling techniques that use symbolic AI. Each of the 11 chapters is divided into 3 sections: section which introduces the techniques, section which develops a low level POP 11 implementation, section which develops a high level Prolog implementation. Comprehensive yet practical, this book will be of great value to those experienced in AI as well as to students with some programming background and academics and professionals looking for a precise discussion of AI through search. This special low priced edition is for sale in India, Bangladesh, Bhutan, Maldives, Nepal, Myanmar, Pakistan, and Sri Lanka only. **Artificial Intelligence Techniques in**

Prolog Yoav Shoham, 1994 This unique book is a broad, clear presentation of artificial intelligence AI problem solving techniques. It selects the most important among the well defined algorithms and procedures in the field, explains them in plain language, and where appropriate provides ALGOL like descriptions of them. Every technique is implemented in Prolog, a language that is quickly learned and allows for easy experimentation in a learning environment. The book includes complete source listings and the software is available online. This book is ideal for hands on courses in AI programming. It is also a useful primary or supplementary text in general introductory AI courses and a complete sourcebook for the practitioner.

Scandinavian Conference on Artificial Intelligence 89 Hannu Jaakkola, S. Linnainmaa, 1989 **Artificial Intelligence Through Search** Chris Thornton, Benedict Du Boulay, 2012-12-06 This is an important textbook on artificial intelligence that uses the unifying thread of search to bring together most of the major techniques used in symbolic artificial intelligence. The authors, aware of the pitfalls of being too general or too academic, have taken a practical approach in that they include program code to illustrate their ideas. Furthermore, code is offered in both POP 11 and Prolog, thereby giving a dual perspective highlighting the merits of these languages. Each chapter covers one technique and divides up into three sections: a section which introduces the technique and its usual applications and suggests how it can be understood as a variant generalisation of search; a section which developed a low level POP 11 implementation; a section which develops a high level Prolog implementation of the technique. The authors also include useful notes on alternative treatments to the material, further reading, and exercises. As a practical book, it will be welcomed by a wide audience including those already experienced in AI, students with some background in programming who are taking an introductory course in AI, and lecturers looking for a precise professional and practical text book to use in their AI courses. About the authors: Dr Christopher Thornton has a BA in Economics and a Sc in Computer Science and a DPhil in Artificial Intelligence. Formerly a lecturer in the Department of AI at the University of Edinburgh, he is now a lecturer in AI in the School of Cognitive and Computing Sciences at the University of Sussex. Professor Benedict du Boulay has a BSc in Physics and a PhD in Artificial Intelligence. Previously a lecturer in the Department of Computing Science at the University of Aberdeen, he is currently Professor of Artificial Intelligence also in the

School of Cognitive and Computing Sciences University of Sussex *Artificial Intelligence with Common Lisp* James L. Noyes, 1992 The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language's features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISP for those having a background in computer science and mathematics Pref **Artificial Intelligence in Chemical Engineering** Thomas E.
