Handbook of Neuroevolution Through Erlang Gene I. Sher, 2012-11-06 Handbook of Neuroevolution Through Erlang presents both the theory behind and the methodology of developing a neuroevolutionary based computational intelligence system using Erlang With a foreword written by Joe Armstrong this handbook offers an extensive tutorial for creating a state of the art Topology and Weight Evolving Artificial Neural Network TWEANN platform In a step by step format the reader is guided from a single simulated neuron to a complete system By following these steps the reader will be able to use novel technology to build a TWEANN system which can be applied to Artificial Life simulation and Forex trading Because of Erlang s architecture it perfectly matches that of evolutionary and neurocomputational systems As a programming language it is a concurrent message passing paradigm which allows the developers to make full use of the multi core multi cpu systems Handbook of Neuroevolution Through Erlang explains how to leverage Erlang s features in the field of machine learning and the system s real world applications ranging from algorithmic financial trading to artificial life and robotics

Models in Archaeology David L. Clarke, 2014-10-24 This major study reflects the increasing significance of careful model formation and testing in those academic subjects that are struggling from intuitive and aesthetic obscurantism toward a more disciplined and integrated approach to their fields of study The twenty six original contributions represent the carefully selected work of progressive archaeologists around the world covering the use of models on archaeological material of all kinds and from all periods from Palaeolithic to Medieval Their common theme is archaeological generalisation by means of explicit model building testing modification and reapplication The contributors seek to show that it is the use of certain models in particular ways that defines archaeology as the practice of one discipline with a set of general tenets that are as applicable in Peru as in Persia Australia as Alaska Sweden as Scotland on material from the second millennium B C to the second millennium A D They assert that careful model formulation within archaeology and the cautious exchange and testing of models within and beyond the discipline provides the only route to the formation of the common internationally valid body of theory which defines a vigorous and coherent discipline and distinguishes it from being a collection of merely regionally applicable special cases
