Archeologische Verzamelingen In Nederland:

Loffelijke verdiensten van de archeologie, 2007 Roman Period Statuettes in the Netherlands and beyond Christel Veen, 2025-10-01 The subject of this study is a relatively rare category of artefacts bronze and terracotta statuettes that represent deities human figures and animals They were introduced in the northwestern provinces by Roman troops from the end of the 1st century BCE onwards The statuettes have been recovered from military and non military settlements the surrounding landscape and to a far lesser extent from sanctuaries and graves Until now their meaning and function have seldom been analysed in relation to their find spots Contrary to traditional studies they have been examined as one separate category of artefacts which offers new insights into the distribution pattern and iconographic representation of deities When studying a group of artefacts a large research area or a large dataset is required as well as dateable artefacts and find contexts These conditions do not apply to the Netherlands and to the majority of statuettes that are central to this study Moreover although the changing appearance of statuettes suggest a transformation of cults the identities of the owners of these statuettes remain invisible to us Therefore the issue of Romanization is not put central here Instead the focus is on a specific aspect of religion known as lived religion within the wider subject of its transformation in the Roman period how people used statuettes in everyday life in the context of their houses and settlements
