Bernsen, 1919-12-06 Originally published in 1992 this title reviews seven major subareas in artificial intelligence at that time knowledge acquisition logic programming and representation machine learning natural language vision the design of an AI programming environment and medicine a major application area of AI This volume was an attempt primarily to inform fellow AI workers of recent European work in AI It was hoped that researchers in sister disciplines such as computer science and linguistics would gain a deeper understanding of the assumptions techniques and tools of contemporary AI

Artificial Intelligence in the Pacific Rim Hozumi Tanaka, 1991 In the last decade AI firmly settled into our industrial society with the expert systems as the representative product However almost every one of the systems could cover only a single task domain In the highly mechanized world of the 21st century systems will become smart and user friendly enough to cover a wide range of task domains Systems with much user friendliness must be multilingual because users in different domains usually have different languages Language is formed in its own culture Therefore promotion for cross cultural scientific interchange will be indispensable for the progress of AI

Paradigms of Artificial Intelligence Programming Peter Norvig, 2014-06-28 Paradigms of AI Programming is the first text to teach advanced Common Lisp techniques in the context of building major AI systems By reconstructing authentic complex AI programs using state of the art Common Lisp the book teaches students and professionals how to build and debug robust practical programs while demonstrating superior programming style and important AI concepts The author strongly emphasizes the practical performance issues involved in writing real working programs of significant size Chapters on troubleshooting and efficiency are included along with a discussion of the fundamentals of object oriented programming and a description of the main CLOS functions This volume is an excellent text for a course on AI programming a useful supplement for general AI courses and an indispensable reference for the professional programmer

Wooldridge,Manuela Veloso,2007-03-06 Artificial Intelligence is one of the most fascinating and unusual areas of academic study to have emerged this century For some AI is a true scientific discipline that has made important and fundamental contributions to the use of computation for our understanding of nature and phenomena of the human mind for others AI is the black art of computer science Artificial Intelligence Today provides a showcase for the field of AI as it stands today The editors invited contributions both from traditional subfields of AI such as theorem proving as well as from subfields that have emerged more recently such as agents AI and the Internet or synthetic actors The papers themselves are a mixture of more specialized research papers and authoritative survey papers The secondary purpose of this book is to celebrate Springer Verlag's Lecture Notes in Artificial Intelligence series **ICS Applied Artificial Intelligence Reporter** ,1985 *Artificial Intelligence Abstracts* ,1988
