Lecture Notes in Analogue Electronics Vančo Litovski, 2023-10-31. This book is mostly devoted to amplification of analogue signals. It covers different technologies: bipolar MOS and MES, and different frequency ranges, but it always deals with small signals. Analogue signals processed in an electronic system may have a wide variety of origins. Among them, we have the signals coming from sensors: electro-mechanical, electro-magnetic, electro-chemical, electro-acoustic, electro-optical, etc. the signals coming from antennas being produced by another electronic system, or are simply cosmic produced, and signals that are generated within the electronic systems. The common property of most of the signals is their small amplitude. In many cases, it is below a micro-volt. Since at the output of the system, we most frequently need a high-amplitude signal, the main action undertaken in the electronic system before any further processing is to amplify.
