Learning Objectives

Assigning Scientific Names Biologists have a great diversity of organisms. Biologists categorize each organism as a taxon. Biologists also use taxonomic hierarchy to group organisms based on their similarities. Biologists use a classification system. The concept of naming and grouping organisms is called **taxonomy**.

For example, Linnaeus developed a naming system, called **binomial nomenclature**, to classify organisms, with species to designate a more particular taxon.

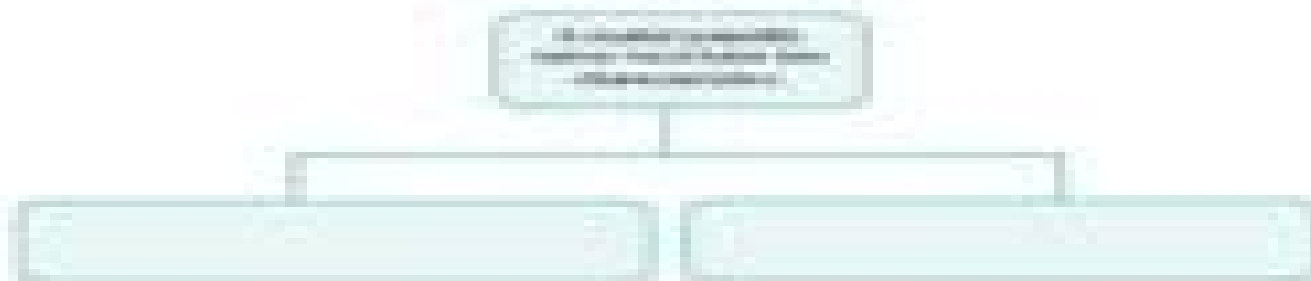

- The first part of the name refers to the genus, or a group of similar species.
- The second part of the name is unique to each species.

Linnaeus's Classification System Linnaeus's system of classification has seven different levels. Biologists use eight hierarchical taxonomic groups: family, order, class, phylum, and kingdom. Each of the ranking levels is called a **taxon**.

- Genus is a group of similar species, a family is a group of similar genera.
- An order is a group of similar families.
- A class is a group of similar orders.
- A phylum is a group of similar classes.
- A kingdom is a group of similar phyla.
