Mobile Big Data Xiang Cheng, Luoyang Fang, Liuqing Yang, Shuguang Cui, 2018-08-23 This book provides a comprehensive picture of mobile big data starting from data sources to mobile data driven applications Mobile Big Data comprises two main components an overview of mobile big data and the case studies based on real world data recently collected by one of the largest mobile network carriers in China In the first component four areas of mobile big data life cycle are surveyed data source and collection transmission computing platform and applications In the second component two case studies are provided based on the signaling data collected in the cellular core network in terms of subscriber privacy evaluation and demand forecasting for network management These cases respectively give a vivid demonstration of what mobile big data looks like and how it can be analyzed and mined to generate useful and meaningful information and knowledge This book targets researchers practitioners and professors relevant to this field Advanced level students studying computer science and electrical engineering will also be interested in this book as supplemental reading

Retail

Geography Shuguang Wang, Paul Du, 2020-05-26 The retail sector is an integral part of a national economy From the political economy perspective all consumer goods have surplus values locked up in them the surplus values are not realized until the consumer goods are purchased by consumers through various distribution channels As such retailing is the essential link between production and consumption The success of a retail business depends on two general factors the location of the retail outlet and management of the business Both factors are equally important If the business is located in the wrong place with the wrong customer base it will not generate expected sales Similarly if the business is poorly managed and operated it will not perform well even if the location is right Influenced by both traditional and new location theories Retail Geography is conceptualized and organized using the retail planning process as the framework The technical and methodological chapters help guide the reader with detailed descriptions of the techniques and are supported with practical examples to reflect the latest software development Retail Geography provides a state of the art summary and will act as a core textbook for undergraduate and graduate students of economic geography interested in specializing in retail and business geography The practical examples also make it a valuable handbook for practitioners in the field as well as students of retail management and commercial real estate management

[Machine Learning for Future Wireless Communications](#) Fa-Long

Luo, 2020-02-10 A comprehensive review to the theory application and research of machine learning for future wireless communications In one single volume Machine Learning for Future Wireless Communications provides a comprehensive and highly accessible treatment to the theory applications and current research developments to the technology aspects related to machine learning for wireless communications and networks The technology development of machine learning for wireless

communications has grown explosively and is one of the biggest trends in related academic research and industry communities Deep neural networks based machine learning technology is a promising tool to attack the big challenge in wireless communications and networks imposed by the increasing demands in terms of capacity coverage latency efficiency flexibility compatibility quality of experience and silicon convergence The author a noted expert on the topic covers a wide range of topics including system architecture and optimization physical layer and cross layer processing air interface and protocol design beamforming and antenna configuration network coding and slicing cell acquisition and handover scheduling and rate adaption radio access control smart proactive caching and adaptive resource allocations Uniquely organized into three categories Spectrum Intelligence Transmission Intelligence and Network Intelligence this important resource Offers a comprehensive review of the theory applications and current developments of machine learning for wireless communications and networks Covers a range of topics from architecture and optimization to adaptive resource allocations Reviews state of the art machine learning based solutions for network coverage Includes an overview of the applications of machine learning algorithms in future wireless networks Explores flexible backhaul and front haul cross layer optimization and coding full duplex radio digital front end DFE and radio frequency RF processing Written for professional engineers researchers scientists manufacturers network operators software developers and graduate students Machine Learning for Future Wireless Communications presents in 21 chapters a comprehensive review of the topic authored by an expert in the field
