

Introduction to Anatomy/Physiology

1. Use anatomical terminology to correctly label and describe directional anatomy of animals

2. Explain the hierarchy of life sciences, specifically the relationship between cells, tissues, organs, and organ systems.

Atoms → molecules → genes → organelles → cells → tissues → organs → organ systems → organisms → populations → ecosystems

3. Describe epithelial tissues and how they are classified by their structural differences (describe these differences)

- Thin, continuous, protective layer of cells with little intercellular matrix
- Line the outer surfaces of organs and blood vessels throughout the body, as well as inner surfaces of cavities in many internal organs
- Responsible for forming barriers and preventing bacteria or other materials from crossing the barrier
- Squamous = plate like
- Cuboidal = cube shaped
- Columnar = long cylindrical
- Simple = single layer
- Stratified = multiple layers

Office of Education, 1972 **Agricultural Education**, 1972 **Self-study Guide in Animal Science** I. L. Brakensiek, Lloyd James Phipps, 1966 *Excel Science Study Guide, Years 7-8* Nicholas Pefani, 2005
Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1968 *Resources in Education*, 1997-07 **Critical Role of Animal Science Research in Food Security and Sustainability** National Research Council, Division on Earth and Life Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence a substantial increase in per capita meat, dairy and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology and resource needs for research in the field of animal agriculture both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems and identifies factors that may impact the ability of the United States to meet demand for animal products including the need for trained human capital, product safety and quality and effective communication and adoption of new knowledge, information and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies and new ways of approaching agriculture if the food, feed and fiber needs of the global population are to be met. The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century. **Psychology, Eighth Edition, in Modules Study Guide** Richard Straub, 2006-08-03 Longtime Myers collaborator Richard Straub's study guide is customized to follow the modular format and contents of the text. **Handbook of Laboratory Animal Science, Volume III** Jann Hau, Steven J. Schapiro, 2013-12-26 While replacing and reducing the use of laboratory animals are integral parts of the 3Rs (replace, reduce, refine) which form the cornerstones of laboratory animal science, biomedical research involving animals remains absolutely essential for the advancement of the medical, veterinary, agricultural and biological sciences. Building upon the bestsel *Handbook of*
