Ankylosing spondylitis and Klebsiella Alan Ebringer, 2012-11-08 Ankylosing spondylitis and Klebsiella is a comprehensive and informative text on the cause of Ankylosing spondylitis Ankylosing spondylitis AS is a condition which affects 20 million people worldwide and is likely caused or initiated by a bowel infection from Klebsiella bacteria When a patient is infected by Klebsiella bacteria his or her immune system will make antibodies against all the antigens or molecules found in the microbe Because some of the bacterial antigens resemble self tissues the anti bacterial antibodies will attack not only the bacteria but also the self tissues such as the joints and the cells having the same HLA molecules which is how the disease AS starts This is the concept of molecular similarity or molecular mimicry which previously has been found to work in two other autoimmune diseases rheumatic fever and rheumatoid arthritis The first paper on this subject was published in 1976 and since then over 100 papers on rheumatological topics have been published from Prof Ebringer s group at the Division of Life Sciences King s College in London UK The relevant information from these papers is extracted and presented in this book format making it accessible to health professionals research institutions pharmaceutical companies and universities and the general public

Myotonic Dystrophy Peter S. Harper, 2002 Myotonic dystrophy is part of the group of muscular dystrophies It is the commonest inherited muscular dystrophy and has a profound effect on individuals who are diagnosed with the disease and their families It is present for many depths of a patient s life and has many attendant implications Associated problems with other organs of the body for example which does not occur in the other dystrophies making this very distinctive disorder and very troubling one for those close to it This book covers a wide range of aspects of

the disease and explains in simple terms exactly what the condition is what the symptoms are and how they can or might develop Also discussed is how to present them or spot them early enough to treat them and so limit any potential debilitation Routes for further study are gone into as it is not claimed that the book is exhaustive it does not for example cover the very rarest manifestations of the illness Self education is encouraged and this book gives anyone interested the tools with which to find out more and empower themselves by taking an active role in their own treatment Most importantly it carries the message that there is hope something can be done even if there is as yet no actual cure Any patient who has left a diagnostic consultation with the impression that there is nothing to be done will find this a great source of hope and strength There are few clinicians more experienced in this field than Peter Harper who has studied and written extensively on the subject
