* The governor spring for the R200 GP governor is located under group 12, Fig. 101 attached to the bottom of the governor housing on the right-hand side.

Revised 10-10-60

* Governor weight (15) is an adjustable threaded housing with spring loaded arm. The governor weight is screwed into the housing plate (16). The governor weight serves to control top exhaust rate of the engine.

* Governor spring (17), fitted into the adjusting screw (18), used to eliminate surging at high idle. At low idle speeds, spring (17) of the governor (15) controls the rate of shutting the thrust sleeve bearing away from the governor lever (26), regulated by the bumper spring (19), thereby automatically increasing control valve travel.

* Shut-off lever (20). The shut-off device consists of the shut-off lever (20), arm (21), spring (22) and governor (23). The shut-off lever (20) is at the bottom end of the housing plate (16) against the housing (23) which slides in a slot of the arm (21) supported on the shaft (25) of the shut-off lever (20). The lever system by which the housing lever is driven on point (24) causes the control valve (15) to move to the right in the direction of "STOP". There is a flexible connection between the arm (21) and the shut-off lever shaft (25) which yields when the spring (22) contracts and prevents excessive shut-off lever travel from damaging linkage. When the shut-off lever (20) is released, a return spring (17) forces it back into its original position or "RUN" position.
