Resources for Teaching Middle School Science Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30 With age appropriate inquiry centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science developed by the National Science Resources Center (NSRC) is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on inquiry centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and

periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents

Civic Education in the Elementary Grades Dana Mitra, Stephanie C. Serriere, 2015 As former elementary school teachers the authors focus on what is possible in schools rather than a romantic vision of what schools could be Based on a 5 year study of an elementary school this book shows how civic engagement can be purposive and critical a way to encourage young people to examine their environment to notice and question injustices and to take action to make a difference in their communities and school Focusing on the intersection of student voice and critical inquiry the book describes how to embed civic engagement into curriculum school decision making processes and whole school activities Chapters provide an overview of what research has demonstrated about civic engagement at the classroom school and community levels including detailed descriptions of activities and lessons for practice Classroom teachers school principals community members and teacher educators can use this resource to foster a deeper richer understanding of what is entailed in civic life Book Features A vivid portrait of a typical public school that wants to do more than teach to the test An examination of the conditions that enable young people to participate in democratic practices including identifying and questioning injustices Concrete examples of student voice and critical inquiry in classroom contexts Practices and activities that encourage children to get along with others exchange perspectives and work across differences Offers a suggestive

range of evidence that high quality civic engagement initiatives can enhance students academic social and emotional engagement It reveals the nitty gritty of how experienced teachers can enable children who are immersed in meaningful civic work also to engage more deeply with mathematical problem solving peer collaboration literacy and social studies learning and development of empathy and mutual trust From the Foreword by Meira Levinson Mitra and Serriere show us not only that elementary aged children are capable of civic engagement but how such engagement can be nurtured in the classroom Children can be active civic participants this book demonstrates both the power of this idea and how we might accomplish this essential task Beth C Rubin Rutgers University
