Drunk Flies and Stoned Dolphins One R. Pagan, 2021-11-16 From the cup of coffee that jumpstarts the day to dangerously addictive drugs the recreational use of plants with psychoactive properties has a long history among humans But as with many things it turns out that other animals got there first From parrots to primates consuming medicinal chemicals is an instinctive behavior that helps countless organisms fight infection and treat disease But the similarities don't end there Like us many creatures also consume substances that have no apparent benefit except for inducing intoxication In fact animals have been using drugs for recreational purposes since prehistoric times We may even have animals to thank for the idea legend says that coffee was discovered by observing the behavior of goats that had eaten it In his previous book *Strange Survivors* author and biologist One R. Pagan introduced readers to some of the truly bizarre strategies animals use to survive in the cutthroat world of natural selection Now in *Drunk Flies and Stoned Dolphins* he sheds light on the surprising cravings they indulge when it's time to unwind In this book you'll get an eye opening glimpse into the mind altering behavior of the non human members of the animal kingdom spanning insects to elephants including the dolphin species that apparently likes to pass around an

intoxicating pufferfish as if they were sharing a joint Combining fascinating science with humor and enthusiasm Page s latest is full of the kind of unforgettable stories and odd facts that you ll find yourself repeating to everyone you meet From fruit fly happy hour to the evolutionary reasons behind nature s drugs *Drunk Flies and Stoned Dolphins* takes you on a trip through the colorful world of animal intoxication and along the way explores what this science reveals about the surprising connections between all the world s creatures

Mousy Cats and Sheepish Coyotes John A. Shivik, 2017-11-07 A wildlife expert explores what science tells us about animals as unique individuals and why animal personality matters for the human animal bond and for adaptation in nature Why are some cats cuddly and others standoffish Why are some dogs adventuresome others homebodies As any pet owner can attest we feel that the animals we ve formed bonds with are unique as particular and peculiar as any human friend or loved one Recent years have brought an increased understanding of animal intelligence and emotion But is there a scientific basis for animal personality and individuality or is this notion purely sentimental It turns out that science has been reluctant to even broach the subject of individuality until recently But now a fundamental shift in scientific understanding is underway as mainstream scientists begin to accept the idea that animals of all kinds from beloved beasts like apes and birds to decidedly less cuddly creatures like crabs and spiders do indeed have individual personalities In *Mousy Cats and Sheepish Coyotes* veteran wildlife expert Dr John A Shivik brings us stories from the front lines of this exciting new discipline Drawing on his scientific training as well as his storytelling gifts Shivik serves as an accessible humorous guide to the emerging body of research on animal personalities Shivik accompanies researchers who are discovering that each wolf bear and coyote has an inherent tendency to favor either its aggressive nature or to shyly avoid conflicts Some bluebirds are lovers others are fighters And some spiders prefer to be loners while others are sociable Unique personalities can be discovered in every corner of the animal kingdom even among microscopic organisms The array of personality types among all species is only beginning to be described and understood As Shivik argues animals unique personalities are important not only because they determine which animals we bond with Individual animal traits are also fundamental but still inadequately understood drivers of evolution adaptation and species diversity Ultimately *Mousy Cats and Sheepish Coyotes* offers insight into the similarities humans share with animals and presents evidence of an unbroken biological connection from the smallest organisms to *Homo sapiens*

Dancing Cockatoos and the Dead Man Test Marlene Zuk, 2022-08-09 Longlisted for the 2023 PEN E O Wilson Literary Science Writing Award A lively exploration of animal behavior in all its glorious complexity whether in tiny wasps lumbering elephants or ourselves For centuries people have been returning to the same tired nature versus nurture debate trying to determine what we learn and what we inherit In *Dancing Cockatoos and the Dead Man Test* biologist Marlene Zuk goes beyond the binary and instead focuses on interaction or the way that genes and environment work together Driving her investigation is a simple but essential question How does behavior evolve Drawing from a wealth of research including her own on insects Zuk answers this question by

turning to a wide range of animals and animal behavior There are stories of cockatoos that dance to rock music ants that heal their injured companions dogs that exhibit signs of obsessive compulsive disorder and so much more For insights into animal intelligence mating behavior and an organism's ability to fight disease she explores the behavior of smart spiders silent crickets and crafty crows In each example she clearly demonstrates how these traits were produced by the complex and diverse interactions of genes and the environment and urges us to consider how that same process evolves behavior in us humans Filled with delightful anecdotes and fresh insights *Dancing Cockatoos and the Dead Man Test* helps us see both other animals and ourselves more clearly demonstrating that animal behavior can be remarkably similar to human behavior and wonderfully complicated in its own right

The Loneliest Polar Bear Kale Williams, 2021-03-23 A moving story of abandonment love and survival against the odds Dr Jane Goodall The heartbreaking and ultimately hopeful story of an abandoned polar bear cub named Nora and the humans working tirelessly to save her and her species whose uncertain future in the accelerating climate crisis is closely tied to our own Six days after giving birth a polar bear named Aurora got up and walked away from her den at the Columbus Zoo leaving her tiny squealing cub to fend for herself Hours later Aurora still hadn't returned The cub was furless and blind and with her temperature dropping dangerously the zookeepers entrusted with her care felt they had no choice They would have to raise one of the most dangerous predators in the world by hand Over the next few weeks a group of veterinarians and zookeepers worked around the clock to save the cub whom they called Nora Humans rarely get as close to a polar bear as Nora's keepers got to their fuzzy charge But the two species have long been intertwined Three decades before Nora's birth her father Nanuq was orphaned when an Inupiat hunter killed his mother leaving Nanuq to be sent to a zoo That hunter Gene Agnaboogok now faces some of the same threats as the wild bears near his Alaskan village of Wales on the westernmost tip of the North American continent As sea ice diminishes and temperatures creep up year after year Agnaboogok and the polar bears and everyone and everything else living in the far north are being forced to adapt Not all of them will succeed Sweeping and tender *The Loneliest Polar Bear* explores the fraught relationship humans have with the natural world the exploitative and sinister causes of the environmental mess we find ourselves in and how the fate of polar bears is not theirs alone
