Modelling in Life Insurance - A Management Perspective Jean-Paul Laurent, Ragnar Norberg, Frédéric Planchet, 2016-05-02 Focusing on life insurance and pensions this book addresses various aspects of modelling in modern insurance insurance liabilities asset liability management securitization hedging and investment strategies With contributions from internationally renowned academics in actuarial science finance and management science and key people in major life insurance and reinsurance companies there is expert coverage of a wide range of topics for example models in life insurance and their roles in decision making an account of the contemporary history of insurance and life insurance mathematics choice calibration and evaluation of models documentation and quality checks of data new insurance regulations and accounting rules cash flow projection models economic scenario generators model uncertainty and model risk model based decision making at line management level models and behaviour of stakeholders With author profiles ranging from highly specialized model builders to decision makers at chief executive level this book should prove a useful resource to students and academics of actuarial science as well as practitioners **Actuarial Model** Yanyun Zhu, 2008 Life insurance and life annuities are about cash flows the time value of money and the randomness of policyholders death time This book intends to present the actuarial model as a combination of these three factors It also describes how to set premiums and reserves for those insurance products Actuarial Models for Disability Insurance Steven Haberman, E Pitacco, 1998-10-20 Disability insurance long term care insurance and critical illness cover are becoming increasingly important in developed countries as the problems of demographic aging come to the fore The private sector insurance industry is providing solutions to problems resulting from these pressures and other demands of better educated and more prosperous populations Actuarial Models for Disability Insurance examines the actuarial structure of disability insurance long term care insurance and critical illness cover including problems encountered in the design and development of such insurances Actuarial problems such as pricing and reserving are considered within the context of multiple state modeling providing a vigorous and sound framework for analyzing personal insurances **Automobile Insurance** Jean Lemaire, 2013-03-09 The mathematical theory of non life insurance developed much later than the theory of life insurance The problems that occur in the former field are far more intricate for several reasons 1 In the field of life insurance the company usually has to pay a claim on the policy only once the insured dies or the policy matures only once It is with only a few particular types of policy for instance sickness insurance when the insured starts working again after a period of sickness that a valid claim can be made on a number of different occasions On the other hand the general rule in non life insurance is that the policyholder is liable to be the victim of several losses in automobile insurance of course but also in burglary and fire insurance householders comprehensive insurance and so on 2 In the field of life insurance the amount to be paid by the company excluding any bonuses is determined at the inception of the policy For the various types of life insurance contracts

the sum payable on death or at maturity of the policy is known in advance In the field of non life insurance the amount of a loss is a random variable the cost of an automobile crash the partial or total loss of a building as a result of fire the number and nature of injuries and so forth
