Addiction Neuroethics Adrian Carter, Wayne Hall, 2011-11-17 Addiction is a significant health and social problem and one of the largest preventable causes of disease globally Neuroscience promises to revolutionise our ability to treat addiction lead to recognition of addiction as a real disorder in need of medical treatment and thereby reduce stigma and discrimination However neuroscience raises numerous social and ethical challenges If addicted individuals are suffering from a brain disease that drives them to drug use should we mandate treatment Does addiction impair an individual's ability to consent to research or treatment How will neuroscience affect social policies towards drug use Addiction Neuroethics addresses these challenges by examining ethical implications of emerging neurobiological treatments including novel psychopharmacology neurosurgery drug vaccines to prevent relapse and genetic screening to identify individuals who are vulnerable to addiction Essential reading for academics clinicians researchers and policy makers in the fields of addiction mental health and public policy

Addiction Neuroethics Adrian Carter, Wayne Hall, Judy Illes, 2011-10-17 Research increasingly suggests that addiction has a genetic and neurobiological basis but efforts to translate research into effective clinical treatments and social policy needs to be informed by careful ethical analyses of the personal and social implications Scientists and policy makers alike must consider possible unintended negative consequences of neuroscience research so that the promise of reducing the burden and incidence of addiction can be fully realized and new advances translated into clinically meaningful and effective treatments This volume brings together leading addiction researchers and practitioners with neuroethicists and social scientists to specifically discuss the ethical philosophical legal and social implications of neuroscience research of addiction as well as its translation into effective economical and appropriate policy and treatments Chapters explore the history of ideas about addiction the neuroscience of drug use and addiction prevention and treatment of addiction the moral implications of addiction neuroscience legal issues and human rights research ethics and public policy Features outstanding and truly international scholarship with chapters written by leading experts in neuroscience addiction medicine psychology and more Informs psychologists of related research in neuroscience and vice versa giving researchers easy one stop access to knowledge outside their area of specialty

Genetic Research on Addiction Audrey Chapman, 2012-08-09 The manner in which genetic research associated with addiction is conducted interpreted and translated into clinical practice and policy initiatives raises important social ethical and legal issues Genetic Research on Addiction fulfils two key aims the first is to identify the ethical issues and requirements arising when carrying out genetically based addiction research and the second is to explore the ethical legal and public policy implications of interpreting translating and applying this research The book describes research guidelines on human protection issues such as improving the informed consent process protecting privacy responsibilities to minors and determining whether to accept industry funding The broader public health policy implications of the research are explored and guidelines offered for developing effective social interventions Highly relevant for clinicians researchers academics and policy makers in the fields of addiction mental health and public policy *Addiction and the Captive Will* Cynthia

Geppert, 2024-05-30 Twenty first century neuroscience has discovered that in some severe cases addiction may so constrain human freedom that the will is only able to choose to use substances of abuse At this advanced stage substance use has become the primary driver of salience co opting and subsuming other moral priorities and human rewards Scholars have investigated Aristotle s concept of akrasia as an ancient mirror of this understanding and there have been some preliminary discussions of Augustine s concept of the divided will as it bears on addiction No detailed and comprehensive exploration of the work of Augustine has yet been undertaken as it relates to three contemporary models of addiction the choice learning and brain disease models Augustine s psychological awareness his mastery of ancient theological and philosophical thinking and his enormous and enduring influence on both Catholic and Protestant theology make him an ideal subject for such research This incisive book argues that Augustine s doctrine of the captive will offers a theological parallel of each of these contemporary models of addiction **Addiction and the Brain** Matilda Hellman, Michael Egerer, Janne Stoneham, Sarah

Forberger, Vilja Männistö-Inkinen, Doris Ochterbeck, Samantha Rundle, 2022-04-22 This book investigates the neuroscientific knowledge on addiction as an epistemic project **Addiction** C. Shelby, 2016-05-01 Addiction argues that addiction should

be understood not as a disease but as a phenomenon that must be understood on many levels at once Employing a complex dynamic systems approach and philosophical methodology Shelby explains addiction as an irreducible neurobiological psychological developmental environmental and sociological phenomenon *The Cambridge Handbook of Substance and Behavioral Addictions* Steve Sussman, 2020-08-06 Written by leaders in the addictions field 100 authors from six countries this handbook is a thoroughly comprehensive resource Philosophical and legal issues are addressed while conceptual underpinnings are provided through explanations of appetitive motivation incentive sensitization reward deficiency and

behavioral economics theories Major clinical and research methods are clearly mapped out e g MRI behavioral economics interview assessments and qualitative approaches outlining their strengths and weaknesses giving the reader the tools needed to guide their research and practice aims The etiology of addiction at various levels of analysis is discussed including neurobiology cognition groups culture and environment which simultaneously lays out the foundations and high level discourse to serve both novice and expert researchers and clinicians Importantly the volume explores the prevention and treatment of such addictions as alcohol tobacco novel drugs food gambling sex work shopping the internet and several seldom investigated behaviors e g love tanning or exercise
